Factorial Survey Experiments Katrin Auspurg, Thomas Hinz, 2014-11-28 Filling a gap in the literature of the field Factorial Survey Experiments provides researchers with a practical guide to using the factorial survey method to assess respondents beliefs about the world judgment principles or decision rules through multi dimensional stimuli vignettes that resemble real life decision making situations Using insightful examples to illustrate their arguments authors Katrin Auspurg and Thomas Hinz guide researchers through all relevant steps including how to set up the factorial experimental design drawing samples of vignettes and respondents how to handle the practical challenges that must be mastered when an experimental plan with many different treatments is embedded in a survey format and how to deal with questions of data analysis In addition to providing the how tos of designing factorial survey experiments the authors cover recent developments of similar methods such as conjoint analyses choice experiments and more advanced statistical tools

**Quantitative Methodologies using Multi-Methods** Sergey Samoilenko, Kweku-Muata Osei-Bryson, 2021-08-23 Quantitative Methodologies using Multi Methods is a multifaceted book written to help researchers It is a user friendly introduction to the popular methods of data mining and data analysis The book avoids getting involved into details that are more suitable for more advanced users it is written for readers who have at most a surface level knowledge of the methods presented in the book The book also serves as an

introductory guide to the subject of complementarity of the tools and techniques of data analysis It shows how methods could be used in synergy to offer insights into the issues that could not be dissected by any single method alone This text can also be used as a set of templates where given a set of research questions the investigator could identify a set of methodological modules for answering the research questions of interest This is not entirely unlike the relationship between the analysis and design phases of the systems development life cycle where the What of the analysis phase has to be translated into the How of the design phase The book can guide the identification of modules the How that are suitable for answering research questions the What It can aid in transitioning a conceptual domain of the research questions into a scaffolding of data analytic and data mining methods The book is also a guide to exploring what data under investigation holds For example an investigator may use the methodological modules presented in this book to generate a set of preliminary questions which after a careful consideration and a requisite culling could be formulated into a set of questions consistent within a selected theory or a framework Finally the book can be used as a generator of new research questions Applying every method in each of the book's modules opens a new dimension ripe with follow up questions such as Why is this so The answers to this question may provide new insight and lead to the development of a new theory

*Statistical Methods for Business and Economics* Gert Nieuwenhuis, 2009 This brand new book in statistics aims to provide an introduction to the key methods and techniques essential to a typical statistics syllabus whilst also helping students to develop the skills needed to analyse interpret and prepare data for use in business economics and related disciplines Covering the essential methods required at undergraduate level the book is structured into four parts that deal with descriptive statistics probability sample theory and inferential statistics taking students from the basics through to more advanced topics such as multiple linear regression Every chapter contains clear descriptions of each technique illustrated with numerous worked examples to aid students in understanding how to practice statistical methods The real data used in the examples is drawn from European sources The text also contains longer case examples set in a European business context to show how statistics is used everyday in the business environment Finally each chapter concludes with a variety of exercises to test students ability to apply the theory and attain a high level of competence in using statistics This comprehensive book is ideal for student of statistics at undergraduate level taking an introductory module in the topic

**Microsimulation and Population Dynamics** Alain Bélanger, Patrick Sabourin, 2017-03-15 This book is a practical step by step introduction to microsimulation in demography It shows how to use Modgen a powerful and free microsimulation platform built by Statistics Canada The authors hands on explanation of model development will help readers make their own The book teaches how to create and run a simple cohort model with a single fixed rate event and builds upon this concept It introduces how to develop both a single state life table as well as a multiple increment decrement life table using the tools provided by Modgen The authors illustrate how to easily upgrade an existing model by adding new modules and new dimensions as determinants of a risk already modeled The

integration of a fertility module and a base population allows the user to bring new actors into the simulation and transform a cohort based model into a population based one The final addition of an international migration module allows the user to accomplish fully open multi regional projections This accessible introduction will be of interest to researchers and students in population studies and other social sciences It will also appeal to anyone interested in the computational modeling of population dynamics

**Research Memorandum** ,1947 *Select a Sample* Paul Silvia,2020-03-09 Whether students are working with existing data or generating their own sampling is a deceptively complicated and anxiety inducing process especially when participants are people Pressured by the usual limitations on time access and resources students can panic at the thought that sampling involves theory and calculations and make snap decisions that usually lead to convenience sampling and ultimately weak research claims This *Fix* takes the panic out of sampling designs and helps students understand what sampling is how it applies to different types of situations and how to decide what approach works best for their project so they can maximize

the impact of their research It covers questions like What is sampling What is my population Should I use probability sampling Should I use subjective non probability sampling How do I sample from ill defined hard to reach and wary populations How can I sample people ethically How can I reduce error and bias in sampling How large should my sample be Students need help over hurdles at every stage of their research project They want simple powerful accessible tools that deliver results fast They need to meet interim assessment deadlines and prove that they have successfully passed through multiple stages of their project or need to master a stage of understanding in a learning cascade before they can proceed to the next week in their methods module Their supervisors are increasingly unable to help but will still be assessing results Students need more than YouTube Titles in the Little Quick Fix series offer Visual design led learning Clear structured useful pedagogy A hand holding step by step approach for students who are less able or less academically prepared by school so far Effective self directed learning with DIY progress tracking A stand in for the busy unavailable supervisor

**Computerized Multistage Testing** Duanli Yan, Alina A. von Davier, Charles Lewis, 2016-04-19 Unlike other forms of adaptive testing multistage testing MST is highly suitable for testing educational achievement because it can be adapted to educational surveys and student testing This volume provides the first unified source of information on the design psychometrics implementation and operational use of MST It shows how to apply theoretical statistical tools to testing in novel and useful ways It also explains how to explicitly tie the assumptions made by each model to observable or at least inferable data conditions
