Intergenerational Solidarity in Children's Literature and Film Justyna Deszcz-Tryhubczak, Zoe Jaques, 2021-02-01 Winner of the 2023 Edited Book Award from the International Research Society for Children's Literature Contributions by Aneesh Barai Clémentine Beauvais Justyna Deszcz Tryhubczak Terri Doughty Aneta Dybska Blanka Grzegorzczak Zoe Jaques Vanessa Joosen Maria Nikolajeva Marek Oziewicz Ashley N Reese Malini Roy Sabine Steels Lucy Stone Björn Sundmark Michelle Superle Nozomi Uematsu Anastasia Ulanowicz Helma van Lierop Debrauwer and Jean Webb Intergenerational solidarity is a vital element of societal relationships that ensures survival of humanity It connects generations fostering transfer of common values cumulative knowledge experience and culture essential to human development In the face of global aging changing family structures family separations economic insecurity and political trends pitting young and old against each other intergenerational solidarity is now more than ever a pressing need Intergenerational Solidarity in

Children's Literature and Film argues that productions for young audiences can stimulate intellectual and emotional connections between generations by representing intergenerational solidarity. For example, one essayist focuses on Disney films which have shown a long time commitment to variously highlighting and then conservatively healing fissures between generations. However, Disney Pixar's *Up* and *Coco* instead portray intergenerational alliances: young collaborating with old, the living working alongside the dead as necessary to achieving goals. The collection also testifies to the cultural, social, and political significance of children's culture in the development of generational intelligence and empathy towards age others and positions the field of children's literature studies as a site of intergenerational solidarity opening possibilities for a new, socially consequential inquiry into the culture of childhood.

Mind-body medicine and its impacts on psychological networks, quality of life, and health, volume II Steffen Schulz, Georg Johannes Seifert, Dirk Cysarz, Frauke Musial, 2025-09-10 Living conditions in industrialized countries have led to a significant increase in life expectancy in recent decades. Likewise, the proportion of chronic diseases is growing. This includes cardiovascular diseases, chronic pain, inflammatory bowel diseases, and cancer. Unfavorable lifestyle factors such as accumulative stress, lack of exercise, and poor nutrition, compounded by a persistent imbalance between exertion and recovery, lead to the manifestation and chronification of disease. A fundamental awareness of the connection between our mind, emotions, lifestyle, and health has grown. Understanding of body and mind interaction is increasing. The high clinical relevance is also supported and confirmed by evidence. Out of this field of research, mind-body medicine (MBM) has developed. MBM targets the interplay of body, mind, emotions, and behavior, extending to the regulation of vegetative physiological signaling pathways.
