Writing Science Markus Asper, 2013-06-26 Scientific and technological texts have not played a significant role in modern literary criticism This applies to Classics too despite the fact that a large part of the field's extant texts deal with questions of medicine mathematics and natural philosophy Focusing mostly on medical and mathematical texts this collection aims at approaching ancient Greek science and its texts from the cross disciplinary perspective of authorship Among the questions addressed are What is a scientific author In what respect does scientific writing differ from literary writing How does the author present himself as an authoritative figure through his text What strategies of trust do these authors employ These and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative

perspective to their subjects As a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication
