synthesis speech recognition and enhancement radar sonar digital audio and remote sensing just to cite a few With this in mind when choosing the topic for the 7th Tyrrhenian Workshop on Digital Communications whose contributions are collected in this book we aimed at focusing on the state of the art and the perspectives of the interaction between DSP and telecommunications two disciplines that are becoming increasingly intertwined Although by no means exhaustive of all the applications of DSP to telecommunications we believe that the material presented in this book pinpoints the most interesting among them and hence it will be considered as a useful tool for investigating this complex and highly challenging field
