**Perspective Taking: building a neurocognitive framework for integrating the “social” and the “spatial”** Klaus Kessler, Sarah H Creem-Regehr, Antonia Hamilton, 2015-06-08

Background Interacting with other people involves spatial awareness of one's own body and the other's body and viewpoint In the past social cognition has focused largely on belief reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions These two domains have flourished independently A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target In spatial cognition research the target is spatially defined as a particular viewpoint or frame of reference FOR yet in social interaction research another viewpoint is occupied by another's mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint Perspective taking has been studied in different ways within developmental psychology cognitive psychology psycholinguistics neuropsychology and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas In particular the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients

virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics *Applying Standards-Based Constructivism* Pat Flynn,Paul Vermette,Don Mesibov,2013-09-27 This book provides teachers with practical ways of constructing lessons that will engage students and help them develop personal responsibility for their own learning State learning standards and related core curricula require students to demonstrate what they know and understand Students cannot learn to demonstrate their understanding if they sit passively The authors call for constructivist practices which recognize the important role played by standards and student accountability and which also acknowledge the practical need for lecture in an appropriate context This book also shows the links between constructivism and differentiated instruction and other approaches to teaching and learning

Performance Assessment Brian McLean Semple,1992 The second International Assessment of Educational Progress focused on the mathematics and science achievement of 13 year olds Performance assessments were used as part of the overall assessment in four countries England Scotland Soviet Union and Taiwan and five Canadian provinces The performance assessment approach drew heavily on the experience of the United Kingdom in such assessments but added features to meet the needs of an international study The performance tasks required students to apply concepts observe measure manipulate equipment and materials and record and interpret data Approximately 3 000 students participated in

the 1991 mathematics and science assessments Scores varied widely from task to task and from country to country Relative performance of countries and provinces generally differed from those identified by written curriculum based tests A major lesson learned from the experimental test administration is that this form of performance assessment can be used reliably in international comparative studies although at an estimated cost three to four times greater than that for an equivalent number of written test questions Sample mathematics and science tasks are included and there is an appendix on problem solving in mathematics that describes outcomes produced by Scottish students SLD

*The Philosophy of Psychology* George Botterill, Peter Carruthers, 1999-08-19 What is the relationship between common sense or folk psychology and contemporary scientific psychology Are they in conflict with one another Or do they perform quite different though perhaps complementary roles George Botterill and Peter Carruthers discuss these questions defending a robust form of realism about the commitments of folk psychology and about the prospects for integrating those commitments into natural science Their focus throughout the book is on the ways in which cognitive science presents a challenge to our common sense self image arguing that our native conception of the mind will be enriched but not overturned by science *The Philosophy of Psychology* is designed as a textbook for upper level undergraduate and beginning graduate students in philosophy and cognitive science but as a text that not only surveys but advances the debates on the topics discussed it will also be of interest to researchers working in these areas
