Arias,M. Lozano,2008-01-11 The eld of nuclear physics is entering the 21st century in an interesting and exciting way On the one hand it is changing qualitatively since new experim tal developments allow us to direct radioactive and other exotic probes to target nuclei as well as to sparko extremely energetic nuclear collisions In parallel detector systems are of an impressive sophistication It is di cult to envisage all the discoveries that will be made in the near future On the other hand the app cations of nuclear science and technology are broadening the limits in medicine industry art archaeology and the environmental sciences etc This implies that the public perception of our eld is changing smoothly but drastically in c trast to former times where nuclear weapons and nuclear power plants were the dominant applications perceived by citizens Both aspects scienti c dynamism and popular recognition should lead the eld to an unexpected revival One of the consequences of the former could be that many brilliant students consider nuclear physics as an excellent eld in which to acquire professional expertise Therefore one of the challenges of the international nuclear physics community is to try to make the eld attractive That means simply being pedagogic and enthusiastic Thus as organisers of an already established summer school our contribution was to put an emphasis in this session on pedagogy and enthusiasm *Energy-Efficient Approaches in Industrial Applications* Murat Eyvaz,Abdulkerim Gok,Ebubekir Yüksel,2019-02-20 A large amount of energy is consumed in the industry to meet the power needed for production processes In order to meet the heat and mechanical power needs required for many industrial processes natural gas petroleum fuel and electricity are mostly used as energy sources In

addition to the efficient use of energy in order to reduce operating costs in industrial applications alternatives such as efficient use of energy for conservation of resources and climate energy recovery renewable energy preferences and energy production from wastes are becoming more common With proper energy management it is possible to increase energy efficiency independently of the size of the industry and the technologies used in the process The development of new alternatives for energy efficiency and saving is crucial to meet the growing world energy needs and to compete effectively with fossil fuels and thus reduce greenhouse gases This small book is a collection of research and reviewed chapters dealing with energy efficient materials and strategies in different conditions The Editors would like to record their sincere thanks to the authors for their contributions
