Design and Implementation of a Database Programming Language for

XML-based Applications Henrike Schuhart, 2006 This publication focuses on two main aspects the seamless integration of XML and persistency concepts into the object oriented programming language Java XML is the de facto standard data exchange format between arbitrary applications There have been many efforts to integrate XML into programming languages reaching from the simple document object model DOM to whole XML class generators These approaches are available in most popular programming languages The integration of persistency into programming languages has been done by database programming languages as well as by certain new popular frameworks like Hibernate or approaches like EJB Nevertheless these approaches suffer from certain limitations concerning in particular transparency and object orientation While existing database programming languages integrate the relational model Hibernate and EJB 3.x does not support polymorphism in general EJB 2.x does not even support inheritance In addition although they try to the approaches except by some database programming languages are not transparent In this work transparency means that arbitrary types may become persistent Moreover algorithms remain unchanged whether they are executed on transient or persistent objects Finally users can work with persistency on a very high level Since there are so many currently developed frameworks trying to solve the integration problem of XML and persistency into object oriented programming languages the need for a holistic and transparent object oriented database programming language seems to be there The starting point of XOBEDBPL which stands for XML OBjEcts Database Programming Language is the predecessor project XOB XOB concentrates on the integration of XML objects and XPath as the query language for these objects The most important feature of XOB is that each XML operation is statically type checked against the declared XML schema In XOBEDBPL the XML integration is extended regarding the manipulation of XML objects Before XML objects could only be queried but not updated The static type checking idea is kept and enhanced to include updates While XOB's intentions lie on the development of web applications all objects can remain transient XOBEDBPL is supposed to deal with persistent objects as well

the 5th International Symposium on Medical Data Analysis has experimented an apparently slight modification The word biological has been added to the title of the conferences The motivation for this shift goes beyond the wish to attract a different kind of professional It is linked to recent trends to produce a shift within various biomedical areas towards genomics based research and practice For instance medical informatics and bioinformatics are being linked in a synergic area denominated biomedical informatics Similarly patient care is being improved leading to concepts and areas such as molecular medicine genomic medicine or personalized healthcare The results from different genome projects the advances in systems biology and the integrative approaches to physiology would not be possible without new approaches in data and information processing Within this scenario novel methodologies and tools will be needed to link clinical and genomic information for instance for genetic clinical trials integrated data mining of genetic clinical records and clinical databases or gene expression studies among others Genomic medicine presents a series of challenges that need to be addressed by researchers and practitioners In this sense this ISBMDA conference aimed to become a place where researchers involved in biomedical research could

meet and discuss For this conference the classical contents of former ISMDA conferences were updated to incorporate various issues from the biological elds Similarly to the incorporation of these new topics of the conference data analysts will face in this world of genomic medicine and related areas signi cant challenges in research education and practice
