Written by 70 specialists, it features stunning wildlife photography of more than 2000 of the world's most important wild mammals, birds, reptiles, amphibians, and insects. With around two million species identified to date, animals are the dominant and most varied form of life on the planet. *Animal* presents a representative selection ranging from the giant baleen whale to fast-moving predators such as sharks, big cats, and birds of prey, as well as microscopic beetles barely 1mm long and other insects. It presents some of the latest species to be described: meet the cute but elusive olinguito from South America which was only identified in 2013, or the skywalker hoolock gibbon that was named after a Star Wars character in 2017. *Animal* also explains how the earth's biodiversity is in sharp decline and the conservation projects underway to safeguard precious species.
