**Abstract** The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The subjects were assessed at baseline and at 12 weeks for physical and psychological health. The physical health assessment included measures of body mass index (BMI), waist circumference, and blood pressure. The psychological health assessment included measures of self-esteem, anxiety, and depression. The results of the study showed that the walking program had a significant positive effect on the physical and psychological health of the subjects. The subjects in the walking program had a significant decrease in BMI, waist circumference, and blood pressure compared to the control group. The subjects in the walking program also had a significant increase in self-esteem, a significant decrease in anxiety, and a significant decrease in depression compared to the control group. The results of this study suggest that a 12-week, low-intensity, supervised walking program can have a significant positive effect on the physical and psychological health of sedentary, middle-aged women.

**Software Visualisation** Peter Eades, Kang Zhang, 1996-11-22 The term software visualisation refers to the graphical display of characteristics and behaviour of all aspects of software design and analysis methods systems programs and algorithms The purpose of this book is to collect and compare different experiences of software visualisation both from fundamental and applied viewpoints The book is divided into four parts covering important aspects of software visualisation Part 1 covers a survey on existing software visualisation tools and environments the strategies for making a software visualisation system language independent and program animation for C language Part 2 presents topics and techniques on graph drawing which supports efficient and aesthetically pleasing visualisation Some recently developed graph drawing systems and techniques used are described Part 3 discusses visual programming concepts and techniques for supporting parallel and heterogeneous distributed programming Part 4 includes several case studies of software visualisation concentrating on the broader field of software engineering ranging from software metrics to reverse engineering

Interfaces to Database Systems (IDS94) Peter H. Sawyer, 2013-11-11 A brief survey of the major DBMS and HeI conference proceedings over the past 10 years will reveal isolated pockets of research in database user interfaces but little sense of being swept along with the general advances in DBMS technology and HeI New data models have evolved to meet the needs of different application domains persistent programming languages are blurring the traditional distinction between data definition and application programming languages distribution and inter operability have become issues as have the storage of heterogeneous media types yet it is still rare to read of the HeI issues raised by these technological innovations being expressly addressed and rarer still to find recognition of the usability problems with longer established database technologies There are at least two reasons why this should be surprising Database systems are not like other computer systems existing both as back ends to other applications and as stand alone data stores they are typically slow deal with very large volumes of data and can involve all sorts of security confidentiality and even cooperability issues Databases are everywhere Perhaps only word processors and spread sheets are more widespread In addition as business cultures change and personal computing continues to mould expectations end users find themselves interacting increasingly closely with database systems

High Performance Computing for Computer Graphics and Visualisation Min Chen, Peter Townsend, John Vince, 2012-12-06 This book contains mainly a selection of papers that were presented at the International Workshop on High Performance Computing or Computer Graphics and Visualisation held in Swansea United Kingdom on 3 4 July 1995 The workshop was sponsored by the HEFCWI Initiative on Parallel Computing Foundations and Applications and it has provided the international computer graphics community with a platform for assessing and reviewing the impact of the development of high performance computing on the progress of computer graphics and visualisation presenting the current use of high performance computing architecture and software tools in computer graphics and visualisation and the development of parallel graphics algorithms identifying potential high performance computing applications in computer graphics and

visualisation and encouraging members of the graphics community to think about their problems from the perspective of parallelism The book is divided into six sections The first section which acts as the introduction of the book gives an overview of the current state of the art It contains a comprehensive survey by Whitman of parallel algorithms for computer graphics and visualisation and a discussion by Hansen on the past present and future high performance computing applications in computer graphics and visualisation The second section is focused on the design and implementation of high performance architecture software tools and algorithms for surface rendering
