Edwards, Brian Fisher, Lace Padilla, 2023-11-06 This book designates Visualization Psychology as an interdisciplinary subject The book contains literature reviews and experimental works that exemplify a range of open questions at this critical intersection It also includes discourses that envision how the subject may be developed in the coming years and decades The field of visualization is a rich playground for discovering new knowledge in both visualization and psychology As visualization techniques augment human cognition these techniques must be developed and improved by building on theoretical empirical and methodological knowledge from psychology At the same time visualization processes surface numerous phenomena about interactions between the human mind and digital entities such as data visual imagery algorithms and computer generated predictions and recommendations Visualization psychology is a new type of science in the making High-Utility Pattern Mining Philippe Fournier-Viger, Jerry Chun-Wei Lin, Roger Nkambou, Bay Vo, Vincent S. Tseng, 2019-01-18 This book presents an overview of techniques for discovering high utility patterns patterns with a high importance in data It introduces the main types of high utility patterns as well as the theory and core algorithms for high utility pattern mining and describes recent advances applications open source software and research opportunities It also discusses several types of discrete data including customer transaction data and sequential data The book consists of twelve chapters seven of which are surveys presenting the main subfields of high utility pattern

mining including itemset mining sequential pattern mining big data pattern mining metaheuristic based approaches privacy preserving pattern mining and pattern visualization The remaining five chapters describe key techniques and applications such as discovering concise representations and regular patterns Visualization of Time-Oriented Data Wolfgang Aigner, Silvia Miksch, Heidrun Schumann, Christian Tominski, 2023-12-21 This is an open access book Time is an exceptional dimension with high relevance in medicine engineering business science biography history planning or project management Understanding time oriented data via visual representations enables us to learn from the past in order to predict plan and build the future This second edition builds upon the great success of the first edition It maintains a brief introduction to visualization and a review of historical time oriented visual representations At its core the book develops a systematic view of the visualization of time oriented data Separate chapters discuss interaction techniques and computational methods for supporting the visual data analysis Many examples and figures illustrate the introduced concepts and techniques So what is new for the second edition First of all the second edition is now published as an open access book so that anyone interested in the visualization of time and time oriented data can read it Second the entire content has been revised and expanded to represent state of the art knowledge The chapter on interaction support now includes advanced methods for interacting with visual representations of time oriented data The second edition also covers the topics of data quality as well as segmentation and labeling The comprehensive survey of classic and contemporary visualization techniques now provides more than 150 self contained descriptions accompanied by illustrations and corresponding references A completely new chapter describes how the structured survey can be used for the guided selection of suitable visualization techniques For the second edition our TimeViz Browser the digital pendant to the survey of visualization techniques received a major upgrade It includes the same set of techniques as the book but comes with additional filter and search facilities allowing scientists and practitioners to find exactly the solutions they are interested in *Foundations of Data Visualization* Min Chen, Helwig Hauser, Penny Rheingans, Geric Scheuermann, 2020-08-11 This is the first book that focuses entirely on the fundamental questions in visualization Unlike other existing books in the field it contains discussions that go far beyond individual visual representations and individual visualization algorithms It offers a collection of investigative discourses that probe these questions from different perspectives including concepts that help frame these questions and their potential answers mathematical methods that underpin the scientific reasoning of these questions empirical methods that facilitate the validation and falsification of potential answers and case studies that stimulate hypotheses about potential answers while providing practical evidence for such hypotheses Readers are not instructed to follow a specific theory but their attention is brought to a broad range of schools of thoughts and different ways of investigating fundamental questions As such the book represents the by now most significant collective effort for gathering a large collection of discourses on the foundation of data visualization Data visualization is a relatively young scientific discipline Over the last three decades a large collection of

computer supported visualization techniques have been developed and the merits and benefits of using these techniques have been evidenced by numerous applications in practice These technical advancements have given rise to the scientific curiosity about some fundamental questions such as why and how visualization works when it is useful or effective and when it is not what are the primary factors affecting its usefulness and effectiveness and so on This book signifies timely and exciting opportunities to answer such fundamental questions by building on the wealth of knowledge and experience accumulated in developing and deploying visualization technology in practice
