Being in Flux Rein Raud, 2021-08-20 Reality exists independently of human observers but does the same apply to its structure Realist ontologies usually assume so according to them the world consists of objects these have properties and enter into relations with each other more or less as we are accustomed to think of them Against this view Rein Raud develops a radical process ontology that does not credit any vantage point any scale or speed of being any range of cognitive faculties with the privilege to judge how the world really is In his view what we think of as objects are recast as fields of constitutive tensions cross sections of processes never in complete balance but always striving for it and always reconfiguring themselves accordingly The human self is also understood as a fluctuating field not limited to the mind but distributed all over the body and reaching out into its environment with different constituents of the process constantly vying for control The need for such a process philosophy has often been voiced but rarely has there been an effort to develop it in a systematic and rigorous manner that leads to original accounts of identity continuity time change causality agency and other topics Throughout his new book Raud engages with an unusually broad range of philosophical schools and debates from New Materialism and Object Oriented Ontology to both phenomenological and analytical philosophy of mind from feminist philosophy of science to neurophilosophy and social ontology Being in Flux will be of interest to students and scholars in philosophy and the humanities generally and to anyone interested in current debates about realism materialism and ontology

Oil Shale, 2003 *The Plant Diversity of Malesia* P. Baas, K. Kalkman, R. Geesink, 2012-12-06 Although the only publication with a realistic claim to the title The plant diversity of Malesia is *Flora Malesiana* itself we have hesitatingly chosen this title for the present proceedings volume Past present and future work on the *Flora Malesiana* project was the subject of a successful symposium held in August 1989 This book contains only a selection of the papers presented at that meeting yet it covers a much greater diversity of themes than just the inventory of botanical diversity It even goes beyond the boundaries of the vast *Flora Malesiana* region in several of its chapters The role of the founder of the *Flora Malesiana* Project Professor C G G J van Steenis repeatedly recurs in several chapters not only as director of and contributor to the project but also as a pioneer in the fields of Malesian vegetation conservation and biogeography and as an enlightened systematist whose ideas and practical recommendations for taxonomic

delimitation still largely apply Botanical information made available in regional and local floras is of vital importance for applications such as the exploitation of natural forests on a sustainable yield basis for establishing gene banks for the benefit of agriculture forestry and horticulture and not in the least for nature conservation Several chapters are devoted to these themes Floristic studies are also at the basis of the biogeographical essays and vegetation studies included in this book

Hutterer,A. Rambo,A. Terry Rambo,George Lovelace,2020-08-06 Ecologists have long based their conceptual frameworks in

the natural sciences Recently however they have acknowledged that ecosystems cannot be understood without taking into account human interventions that may have taken place for thousands of years And for their part social scientists have recognized that human behavior must be understood in the environment in which it is acted out Researchers have thus begun to develop the area of human ecology Yet human ecology needs suitable conceptual frameworks to tie the human and natural together In response Cultural Values and Human Ecology uses the framework of cultural values to collect a set of highly diverse contributions to the field of human ecology Values represent an important and essential aspect of the intellectual organization of a society integrated into and ordained by the over arching cosmological system and constituting the meaningful basis for action in terms of concreteness and abstraction of content as well as mutability and permanence Because of this balance values lend themselves to the kinds of analyses of ecological relationships conducted here those that demand a reasonable amount of specificity as well as historical stability The contributions to Cultural Values and Human Ecology are exceedingly diverse They include abstract theoretical discussions and specific case studies ranging across the landscape of Southeast Asia from the islands to southern China They deal with hunting gathering populations as well as peasants operating within contemporary nation states and they are the work of natural scientists social scientists and humanists of Western and Asian origin Diversity in the backgrounds of the authors contributes most to the varied approaches to the theme of this volume because differences in cultural background and academic tradition will lead to different research interests and to differences in the empirical approaches chosen to pursue given problems
