

### Summary

- An Input symbol is used to enter data into a program during a program run
- Inputs store the entered data in variables, and are best with helpful prompts
- Text input must be within quotes but numeric input is never inside quotes
- An Assignment symbol interprets an expression and stores the result in a variable
- The Assignment symbol in a flowchart is a rectangle
- Always use meaningful variable names. For example, use Age for age...not x
- The & character is used to concatenate variables and strings in Outputs
- Spaces at the beginning or end of strings avoids "jams" when concatenating

### Visual Logic Assignment Two

Create a Visual Logic program that prompts the user to enter two numbers and then displays the sum, product, and average of the numbers. The entire program should run in one console window. Here are two sample runs:

```
Please enter a number 12
Enter another number, please 4
12 + 4 = 16
12 * 4 = 48
The average of 12 and 4 is 8
```

```
Please enter a number 5
Enter another number, please 8
5 + 8 = 13
5 * 8 = 40
The average of 5 and 8 is 6.5
```

Save the program as VLogic2.vls.

### Hints

- Use the \* operator for multiplication as shown
- You will need sharp concatenation skills to get the outputs. Always place an & between a variable and a quoted string
- You will need 2 Inputs, 3 Assignments, and at least 1 Output. It can be done with one Output (by pressing Enter for line feeds) but if you use 3 Outputs that's OK.

---

### Lesson Three ( perform actions in boldface )

# Visual Logic Study Guide
