medicine worldwide      *George Gaylord Simpson* Léo F. Laporte, 2000 Focusing on Simpson's scientific contributions Laporte provides chapters on Simpson's earliest paleontological research through his distinguished Alexander Agassiz professorship at Harvard and his extensive fieldwork for the American Museum of Natural History where he developed the core themes set forth in his most prestigious work *Tempo and Mode in Evolution*      **Natural Selection** Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology It invites the reader to consider an alternative view which favors a more complete and multidimensional interpretation It is common to present the 1930-1960 period as characterized by the rise of the Modern Synthesis an event structured around two main explanatory commitments 1 Gradual evolution is explained by small genetic changes variations oriented by natural selection a process leading to adaptation 2 Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension of processes and mechanisms occurring at the previous microevolutionary level On this view natural selection holds a central explanatory role in evolutionary theory one that presumably reaches back to Charles Darwin's *Origin of Species* a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide theories relying on strong selective factors and those appealing only to weak ones If one reads the new analyses presented in this volume by biologists historians and philosophers this divide seems to be collapsing at a rapid pace opening an era dedicated to the search for a new paradigm for the development of evolutionary biology Contrary to popular belief scholars' position on natural selection is not in itself a significant discriminatory factor between most evolutionists In fact the intellectual space is quite limited if not non-existent between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development In this book the labels created under the traditional historiography Darwinian Revolution Eclipse of Darwinism Modern Synthesis Post-Synthetic Developments are thus re-evaluated This book will not only appeal to researchers working in evolutionary biology but also to historians and philosophers      **The Evolution of Adaptive Systems** James Patrick Brock, 2000-07-12 The data of evolutionary biology have changed in a very radical way in recent years the most significant input to this revolution being the advances made in developmental genetics Another recent development is a noticeable shift away from extreme specialization in evolutionary biology In this we are perhaps to be reminded of George Gaylord Simpson's comments evolution is an incredibly complex but at the same time integrated and unitary process The main objective of this book is to illustrate how natural adaptive systems evolve as a unity with the particular objective of identifying and merging several special theories of evolution within the framework of a single general theory The *Evolution of Adaptive Systems* provides an interdisciplinary overview of the general theory of evolution from the standpoint of the dynamic behavior of natural adaptive systems The approach leads to a radically

new fusion of the diverse disciplines of evolutionary biology serving to resolve the considerable degree of conflict existing between different schools of contemporary thought The book is a timely volume written by a natural historian with a broad view of biology The author draws examples from a large range of organisms from many different habitats and niches where interesting adaptations have evolved Probes deeply into mechanisms of evolution such as developmental genetics morphogenesis chromosome structure and cladogenesis Clear definition of terms with illustrations visualizing the main theoretical structures and point by point summaries clearly stating the principal conclusions

*Science as a Process* David L. Hull, 2010-12-15 Legend is overdue for replacement and an adequate replacement must attend to the process of science as carefully as Hull has done I share his vision of a serious account of the social and intellectual dynamics of science that will avoid both the rosy blur of Legend and the facile charms of relativism Because of Hull's deep concern with the ways in which research is actually done *Science as a Process* begins an important project in the study of science It is one of a distinguished series of books which Hull himself edits Philip Kitcher *Nature In Science as a Process* David Hull argues that the tension between cooperation and competition is exactly what makes science so successful Hull takes an unusual approach to his subject He applies the rules of evolution in nature to the evolution of science arguing that the same kinds of forces responsible for shaping the rise and demise of species also act on the development of scientific ideas Natalie Angier *New York Times Book Review* By far the most professional and thorough case in favour of an evolutionary philosophy of science ever to have been made It contains excellent short histories of evolutionary biology and of systematics the science of classifying living things an important and original account of modern systematic controversy a counter attack against the philosophical critics of evolutionary philosophy social psychological evidence collected by Hull himself to show that science does have the character demanded by his philosophy and a philosophical analysis of evolution which is general enough to apply to both biological and historical change Mark Ridley *Times Literary Supplement* Hull is primarily interested in how social interactions within the scientific community can help or hinder the process by which new theories and techniques get accepted The claim that science is a process for selecting out the best new ideas is not a new one but Hull tells us exactly how scientists go about it and he is prepared to accept that at least to some extent the social activities of the scientists promoting a new idea can affect its chances of being accepted Peter J Bowler *Archives of Natural History* I have been doing philosophy of science now for twenty five years and whilst I would never have claimed that I knew everything I felt that I had a really good handle on the nature of science Again and again Hull was able to show me just how incomplete my understanding was Moreover *Science as a Process* is one of the most compulsively readable books that I have ever encountered Michael Ruse *Biology and Philosophy*

**Artificial Life IX** Jordan B. Pollack, 2004 Proceedings from the ninth International Conference on Artificial Life papers by scientists of many disciplines focusing on the principles of organization and applications of complex life like systems Artificial Life is an interdisciplinary effort to investigate the fundamental

properties of living systems through the simulation and synthesis of life like processes The young field brings a powerful set of tools to the study of how high level behavior can arise in systems governed by simple rules of interaction Some of the fundamental questions include What are the principles of evolution learning and growth that can be understood well enough to simulate as an information process Can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes How can we unify theories from dynamical systems game theory evolution computing geophysics and cognition The field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society This elite biennial meeting has grown from a small workshop in Santa Fe to a major international conference This ninth volume of the proceedings of the international A life conference reflects the growing quality and impact of this interdisciplinary scientific community

Modular Evolution Lucio Vinicius, 2010-07-15 Natural selection is more than the survival of the fittest it is a force engendering higher biological complexity Presenting a new explanation for the tendency of life to become more complex through evolution this book offers an introduction to the key debates in evolutionary theory including the role of genes and sex in evolution the adaptive reasons for senescence and death and the origin of neural information The author argues that biological complexity increased through the process of modularity transfer modular phenotypes proteins somatic cells learned behaviours evolved into new modular information carriers regulatory proteins neural cells words giving rise to new information systems and higher levels of biological organisation Modular Evolution makes sense of the unique place of humans in evolution both as the pinnacle of biological complexity and inventors of non biological evolution

Darwinian Misadventures in the Humanities Eugene Goodheart, 2018-05-04 In recent decades the humanities have been in thrall to postmodern skepticism while Darwinists brimming with confidence in the genuine progress they have made in the sciences of biology and psychology have set their sights on rescuing the humanities from the ravages of postmodernism In this volume Eugene Goodheart attacks the neo Darwinist approach to the arts and articulates a powerful defense of humanist criticism E O Wilson the distinguished Harvard biologist has spoken of converting philosophy into science substituting science for religion and formulating a biological theory of literature and the arts in *Consilience The Unity of Knowledge* Goodheart demonstrates that Wilson s efforts and those of his colleagues Richard Dawkins Steven Pinker and Daniel Dennett among others have resulted in scientism rather than science If for example Dawkins had contented himself in *The Selfish Gene* with the claim that Darwinism had made worthless other answers to the question of how we have evolved he would have given offense only to creationists but questions of meaning and purpose are of another order Contemporary Darwinist critiques err in assuming that art and traditional criticism aspire to truths that can be codified in terms of scientific laws If this were so we would have

to regard the speculations of Plato Aristotle Augustine Montaigne Shakespeare and Rousseau as worthless Goodheart exposes the philistinism of literary Darwinism the bad faith and inverted fundamentalism of the Darwinian approach to religion and the dangers of the effort to create a Darwinian ethical system Taken together Goodheart's arguments show that in moving beyond their area of competence the neo Darwinists commit an ideology not a science **New York Magazine**,1995-01-02 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating New York as both a place and an idea *Report of the Meeting ANZAAS (Association)*,1951 **Genetic Afterlives** Noah Tamarkin,2020-09-11 In 1997 M E R Mathivha an elder of the black Jewish Lemba people of South Africa announced to the Lemba Cultural Association that a recent DNA study substantiated their ancestral connections to Jews Lemba people subsequently leveraged their genetic test results to seek recognition from the post apartheid government as indigenous Africans with rights to traditional leadership and land retheorizing genetic ancestry in the process In Genetic Afterlives Noah Tamarkin illustrates how Lemba people give their own meanings to the results of DNA tests and employ them to manage competing claims of Jewish ethnic and religious identity African indigeneity and South African citizenship Tamarkin turns away from genetics researchers results that defined a single story of Lemba peoples true origins and toward Lemba understandings of their own genealogy as multivalent Guided by Lemba people's negotiations of their belonging as diasporic Jews South African citizens and indigenous Africans Tamarkin considers new ways to think about belonging that can acknowledge the importance of historical and sacred ties to land without valorizing autochthony borders or other technologies of exclusion *Bulletin of the Atomic Scientists* ,1986-04 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world **TIME the Power of Habits** The Editors of TIME,2018-11-09 The Editors of TIME Magazine present The Power of Habits *Unfinished Synthesis* Niles Eldredge,1985-11-21 This study provides a stimulating critique of contemporary evolutionary thought analyzing the Modern Synthesis first developed by Theodosius Dobzhansky Ernst Mayr and George Gaylord Simpson The author argues that although only genes and organisms are taken as historic individuals in conventional theory species higher taxa and ecological entities such as populations and communities should also be construed as individuals an approach that yields the ecological and genealogical hierarchies that interact to produce evolution This clearly stated controversial work will provoke much debate among evolutionary biologists systematists paleontologists and ecologists as well as a wide range of educated lay readers *The Grays* Whitley Strieber,2007-04-01 In the 1 New York Times bestselling tradition of Communion Whitely Strieber returns with a terrifying novel of alien occupation We are not
