

CHNOPS! - Simulating Protein Synthesis

Pre-Lab Discussion

Genes are the units that determine inherited characteristics, such as hair color and blood type. Genes are lengths of DNA molecules that determine the structure of polypeptides (the building blocks of proteins) that our cells make. The sequence of nucleotides in DNA determines the sequence of amino acids in polypeptides, and thus the structure of proteins.

In this investigation, you will simulate the mechanism of protein synthesis and thereby determine the traits inherited by fictitious organisms called CHNOPS. CHNOPS, whose cells contain only one chromosome made up of six genes (A, B, C,D, E, and F), are members of the Kingdom Animalia. Each gene is responsible for a certain trait.

Materials

Blue Pencil; Orange Pencil

Procedure

1) To determine the trait for Gene A of your CHNOPS, fill in the information in the box labeled Gene A in the Data Table. Notice the sequence of nucleotides in DNA. On the line provided, write the sequence of nucleotides of mRNA that are complementary to DNA. Then, on the line provided, write the sequence of nucleotides of tRNA that are complementary to mRNA.

2) In order to determine the sequence of amino acids, match each mRNA triplet ("codon") with the specific amino acid in **Figure 1**. Using a - (hyphen) to separate each amino acid number, record this information in the appropriate place in the Data Table.

3) Using **Figure 2**, find the trait that matches the amino acid sequence. Record this information in the appropriate place in the data table.

4) Repeat steps 1 through 3 for the remaining genes (B through F).

5) Using all the inherited traits, sketch your CHNOPS in the space provided (use COLOR)
