2. 2.6 The continuous random variable X has probability density function given by

$$f(x) = cx, \quad 0 < x < 1$$

Find c and $P[X > 1/2]$.

Since f is a probability density function we need to find the constant c so that $\int_0^1 f(x)dx = 1$ or $\int_0^1 cxdx = 1$ giving $c = 2$. Then

$$P(X > \frac{1}{2}) = \int_{1/2}^1 f(x)dx = x^2|_{1/2}^1 = (1 - 1/4) = 3/4.$$

3. 2.7 If X and Y have joint probability density function given by

$$f(x, y) = 2 \exp\{-(x + 2y)\}, \quad 0 < x < \infty, 0 < y < \infty$$

find

$$P[X < Y].$$

The joint probability density function is

$$f(x, y) = 2e^{-(x+2y)}, 0 < x < \infty \text{ and } 0 < y < \infty.$$

Therefore

$$\begin{aligned} P(X < Y) &= \int \int_{\{(x,y): x < y\}} f(x, y) dx dy \\ &= \int_0^\infty \left(\int_0^y f(x, y) dx \right) dy \\ &= \frac{1}{3}. \end{aligned}$$

4. 2.15 An airplane needs at least half its engines to safely complete its mission. If each engine independently functions with probability p , for what values of p is a two engine plane safer than a three engine plane?

Let c be the number of engines required to safely complete the mission. Then when there are n engines, $c = 1$ when $n = 2$ and $c = 2$ when $n = 3$. The number of engines that operate properly is X , a binomial random variable with parameters n and p . Therefore the probability that the mission is successful is

$$\begin{aligned} P_2 &= P(X \geq 1) = \sum_{i=1}^2 \binom{2}{i} p^i (1-p)^{2-i} \text{ when } n = 2 \\ P_3 &= P(X \geq 2) = \sum_{i=2}^3 \binom{3}{i} p^i (1-p)^{3-i} \text{ when } n = 3 \end{aligned}$$

Introduction to Probability Simulation and Gibbs Sampling with R Eric A. Suess,Bruce E. Trumbo,2010-05-27 The first seven chapters use R for probability simulation and computation including random number generation numerical and Monte Carlo integration and finding limiting distributions of Markov Chains with both discrete and continuous states Applications include coverage probabilities of binomial confidence intervals estimation of disease prevalence from screening tests parallel redundancy for improved reliability of systems and various kinds of genetic modeling These initial chapters can be used for a

non Bayesian course in the simulation of applied probability models and Markov Chains Chapters 8 through 10 give a brief introduction to Bayesian estimation and illustrate the use of Gibbs samplers to find posterior distributions and interval estimates including some examples in which traditional methods do not give satisfactory results WinBUGS software is introduced with a detailed explanation of its interface and examples of its use for Gibbs sampling for Bayesian estimation No previous experience using R is required An appendix introduces R and complete R code is included for almost all computational examples and problems along with comments and explanations Noteworthy features of the book are its intuitive approach presenting ideas with examples from biostatistics reliability and other fields its large number of figures and its extraordinarily large number of problems about a third of the pages ranging from simple drill to presentation of additional topics Hints and answers are provided for many of the problems These features make the book ideal for students of statistics at the senior undergraduate and at the beginning graduate levels

An Elementary Introduction to Mathematical Finance Sheldon M. Ross, 2003 Table of contents *Mathematical Reviews*, 2001 **Scientific and Technical Aerospace Reports**, 1991-05 **Internet Tiered Services** George N. Rouskas, 2009-04-21 As

telecommunications products and services have become an essential part of everyday life consumers have at the same time grown intimately familiar with the concept of tiered pricing that is associated with such services With tiered service structures users may select from a small set of tiers that offer progressively higher levels of service with a corresponding increase in price Tiered structures have been applied in several forms to wireless services e g characterized by the amount of voice minutes number of text messages or the size of one's circle of friends to whom voice calls are free Internet broadband access e g the access speed or volume of monthly transferred data and digital TV offerings e g the number of channels included among others Service tiering is a form of market segmentation which if applied appropriately benefits both providers and consumers by making available services and associated price points that reflect the diversity in consumers' needs and ability to pay The purpose of this book is to develop a theoretical framework for reasoning about and pricing Internet tiered services as well as a practical algorithmic toolset

for network providers to develop customized menus of service offerings We provide a comprehensive study of the design sizing and pricing of tiered structures for Internet services and we illustrate their potential in simplifying the operation of complex components such as packet schedulers
