Nutrient Pollution of Coastal Rivers, Bays, and Seas, 2007 **Nutrient Pollution** United States. Congress. Senate. Committee on Environment and Public Works. Subcommittee on Water and Wildlife, 2017 Comparative Institutional and Policy Analysis of Nonpoint Source Agricultural Nutrient Pollution in the Chesapeake Bay Jennifer M. Egan, 2016 Reducing excess nitrogen and phosphorous nutrient runoff into ground and surface waters is a global concern Jacobs 2013 More than two decades of effort in the United States Chesapeake Bay region to reduce nutrient excess has seen slow progress U S EPA 2010 The externality of nutrient excess has spurred environmental groups to seek rights they view as unallocated in resolution processes This dissertation presents several ideas regarding nutrient externality The second chapter argues that the judicial process is poorly positioned to resolve this conflict relative to other resolution processes and other processes would be more likely for environmental groups to achieve their goal of improving environmental quality The third chapter addresses the design and implementation of effective policy for nutrient reduction from nonpoint source agriculture Nutrient management planning and nutrient trading requirements are comparatively analyzed in Maryland Pennsylvania and Virginia to determine factors in policy design that affect policy outputs The results indicate that an existing institutional structure utilizing incentive based nutrient management planning may be more compatible with nutrient trading policies and in turn may reduce the cost of monitoring Although monitoring cost increase with nutrient trading the existing policy design in Virginia may provide capacity to lower monitoring cost The fourth chapter analyzes payment for environmental services PES and nutrient trading with a novel approach A nutrient index combines PES for nitrogen and phosphorous reduction and a sensitivity analysis into a single payment to elicit potential costs of supply in the nutrient market This nutrient index is the first of its kind to distinguish payments made for multiple environmental services and to explore the impact on policy effectiveness with overlapping nutrient reduction policies PES and nutrient trading policies pay for the same service yet PES as demonstrated in the results of this study has potential to increase prices of nutrient credits establish a price floor or collapse the nutrient trading market altogether In addition the existence of the trading market has potential to reduce the effectiveness of existing PES which already suffers from ineffective payment for nutrient services **Nutrient Cycling in Terrestrial Ecosystems** A. F. Harrison, Philip Ineson, O. W. Heal, 1990 A source of information for environmental scientists involved in research of the inputs cycling and losses of nutrients in terrestrial ecosystems A division has been made into a series of sections dealing in turn with inputs losses turnover and plant uptake **Nutrient Indicator Models for Determining Biologically Relevant Levels** Charles Clarence Morris, Thomas Paul Simon, 2012-04-02 Nutrient Indicator Models for Determining Biologically Relevant Levels A case study based on the Corn Belt and Northern Great Plain Nutrient Ecoregion is the first book to provide answers to the management of nutrients based on changes in biological communities The text describes a case study that is the result of a large scale project in the Corn Belt and Great Plains Nutrient Ecoregion

This study is the first to identify relationships between fish assemblages and nutrient concentrations by Nitrogen species. Species optima based on sensitivity and tolerance to nutrients is modeled. Nutrient Biotic indices calibrated for application are based on the results of years of biological indicator development. Test response intervals and Shift response intervals are formulated and validated against relevant biological assemblage shifts. This case study is the first to suggest recommended values for the nitrogen and phosphorus cycle with identifiable shifts caused in biological assemblages. This will provide watershed and environmental managers with the information needed to manage the inputs into the world's dead zones.
