Modular Programming of Adaptive CAX Manufacturing Process Chains (E-Book) Gunter Spöcker, 2016-11-07 The manufacturing industry is undergoing major changes due to current trends like mass customization and Industrie 4.0. However today's CAX systems and approaches are not suitable to handle adaptive CAX process chains. To overcome this situation and to close the gaps between the existing CAX environment and the requirements for the manufacturing of the future a modular approach based on extended function blocks is presented. The proposed approach is verified based on the use case of a worn out BLIR segment by using repair features. *AMST'05 Advanced Manufacturing Systems and Technology* Elso Kuljanic, 2007-03-23 Manufacturing a product is not difficult the difficulty consists in manufacturing a product of high quality at a low cost and rapidly. Drastic technological advances are changing global markets very rapidly. In such conditions the ability to compete successfully must be based on innovative ideas and new products which has to be of high quality yet low in price. One way to achieve these objectives would be through massive investments in research of computer based technology and by applying the approaches presented in this book. The First International Conference on Advanced Manufacturing Systems and Technology AMST87 was held in Opatija Croatia in October 1987. The Second International Conference on Advanced Manufacturing Systems and Technology AMSV90 was held in Trento Italy in June 1990. The Third Fourth Fifth and Sixth Conferences on Advanced Manufacturing Systems and Technology were all held in Udine Italy as follows AMST93 in April 1993 AMST96 in September 1996 AMST99 in June 1999 and AMST02 in June 2002.

This book is designed for students and teachers who are looking for a programming course in combination with a graphic simulation software. The course is based on the understanding of the ISO Standard functions i.e. the programming language at the basis of all numeric controls. The training and simulating software faithfully replicates a real numeric control on your computer. This course comprises chapters and paragraphs for both theoretical and practical learning. Paragraphs on theory contain drawings and diagrams that simplify the understanding of the text. The first practical experiences consist in the utilization of pre drafted programs which are useful to the participant's initial understanding of the numeric control and its potential. Later you will learn how to write new programs with difficulty levels that are commensurate to the acquired experience. During the practical exercises the reader is constantly guided by the respective operating procedures. The learning method has been developed so that even beginners may complete the course and understand all the most complex functions and programming methods. Periodical tests are offered in order to help the students and teachers assess progress achieved or to highlight the topics for review. This is a fifty hour course. The total number of hours necessary for the understanding of the theoretical part and for carrying out the practical exercises will always be specified at the beginning of each chapter. The course is centered on a three axis lathe.
