**Fractal Patterns in Nonlinear Dynamics and Applications** Santo Banerjee, M K Hassan, Sayan Mukherjee, A Gowrisankar, 2020-03-27 Most books on fractals focus on deterministic fractals as the impact of incorporating randomness and time is almost absent Further most review fractals without explaining what scaling and self similarity means This book introduces the idea of scaling self similarity scale invariance and their role in the dimensional analysis For the first time fractals emphasizing mostly on stochastic fractal and multifractals which evolves with time instead of scale free self similarity are discussed Moreover it looks at power laws and dynamic scaling laws in some detail and provides an overview of modern statistical tools for calculating fractal dimension and multifractal spectrum

**Invitation to Topological Robotics** Michael Farber, 2008 This book discusses several selected topics of a new emerging area of research on the interface between topology and engineering The first main topic is topology of configuration spaces of mechanical linkages These manifolds arise in various fields of mathematics and in other sciences e g engineering statistics molecular biology To compute Betti numbers of these configuration spaces the author applies a new technique of Morse theory in the presence of an involution A significant result of topology of linkages presented in this book is a solution of a conjecture of Kevin Walker which states that the relative sizes of bars of a linkage are determined up to certain equivalence by the cohomology algebra of the linkage configuration space This book also describes a new probabilistic approach to topology of

linkages which treats the bar lengths as random variables and studies mathematical expectations of Betti numbers The second main topic is topology of configuration spaces associated to polyhedra The author gives an account of a beautiful work of S R Gal suggesting an explicit formula for the generating function encoding Euler characteristics of these spaces Next the author studies the knot theory of a robot arm focusing on a recent important result of R Connelly E Demain and G Rote Finally he investigates topological problems arising in the theory of robot motion planning algorithms and studies the homotopy invariant TC X measuring navigational complexity of configuration spaces This book is intended as an appetizer and will introduce the reader to many fascinating topological problems motivated by engineering
