capacity constrained conveyor systems Individual conveyors can easily be overburdened in case a multitude of incoming trucks with a large number of parcels designated for the same conveyor are unloaded concurrently Thus scheduling incoming trucks efficiently is crucial for the operational performance of the parcel hub This book explores different approaches to optimize the truck scheduling problem at parcel hubs by developing several mathematical optimization models Further the author illustrates efficient algorithms to solve the mathematical problem and designs a simulation model to further investigate the problem setting The results show that optimized truck schedules have the potential to significantly improve the operational performance of parcel hubs
