Frequency Analysis of Vibration Energy Harvesting Systems Xu Wang, 2016-07-26 Frequency Analysis of Vibration Energy Harvesting Systems aims to present unique frequency response methods for analyzing and improving vibration energy harvesting systems Vibration energy is usually converted into heat energy which is transferred to and wasted in the environment If this vibration energy can be converted into useful electric energy both the performance and energy efficiency of machines vehicles and structures will be improved and new opportunities will open up for powering electronic devices To make use of ambient vibration energy an effective analysis and design method is established and developed in this book The book covers a wide range of frequency response analysis methods and includes details of a variety of real life applications MATLAB programming is introduced in the first two chapters and used in selected methods throughout the book Using the methods studied readers will learn how to analyze and optimize the efficiency of vibration energy systems This book will be ideal for postgraduate students and researchers in mechanical and energy engineering Covers a variety of frequency response analysis methods including Fourier and Laplace transform transfer function integration and state space for piezoelectric and electromagnetic vibration energy harvesting analysis Provides coverage of new and traditional methods of analyzing and optimizing the power and efficiency of vibration energy harvesting systems with MATLAB exercises provided throughout Demonstrates a wide range of real life applications such as ocean wave energy conversion vehicle suspension vibration energy harvesting and more Physical Chemistry Henry Eyring, Douglas Henderson, Wilhelm Jost, 1967
