Vanishing Life on Earth Bimalendu B. Nath, 2025-03-15 The book is an abridged story of life that we see now and the life forms that existed in the past Readers can flip through pages of the planet's history and explore the secrets hidden in the fossils scattered across forgotten landscapes The species we see today are only a tiny fraction of all those that have ever lived on Earth Most of the species have vanished throughout the Earth's history The author intersected at five major extinction episodes and narrated selected stories of the lost world while highlighting life's journey on our plants from tiny microorganisms to massive dinosaurs mammoths and mastodons ultimately leading up to humans Unfortunately we're now facing a critical moment when Earth's biodiversity is at risk of being wiped out entirely and our planet may stop breathing one day This prompts readers to reflect on what we have done to bring life's diversity to such a vulnerable state The author concludes the book with future perspectives on how we all can stop the next mass extinction **The Story of Life & the Environment** Jo van As, 2012-10-30 The Story of Life how systems work how populations expand and contract and how all the elements of life interact And it tells the story of how humans originated in Africa and how we have evolved to become modern people The book sounds a warning about our human impact on the planet which is fostering rapid climate change as well as massive over consumption and depletion of resources The book is also about responsible planning and management of our environment and natural resources to redress damage and ensure sustainability This is the story of life and the environment in Africa **The Deep History of Ourselves** Joseph LeDoux, 2020-08-25 Longlisted for the PEN E O Wilson Literary Science Writing Award A leading neuroscientist offers a history of the evolution of the brain from unicellular organisms to the complexity of animals and human beings today Renowned neuroscientist Joseph LeDoux digs into the natural history of life on earth to provide a new perspective on the similarities between us and our ancestors in deep time

This page turning survey of the whole of terrestrial evolution sheds new light on how nervous systems evolved in animals how the brain developed and what it means to be human In *The Deep History of Ourselves* LeDoux argues that the key to understanding human behavior lies in viewing evolution through the prism of the first living organisms By tracking the chain of the evolutionary timeline he shows how even the earliest single cell organisms had to solve the same problems we and our cells have to solve each day Along the way LeDoux explores our place in nature how the evolution of nervous systems enhanced the ability of organisms to survive and thrive and how the emergence of what we humans understand as consciousness made our greatest and most horrendous achievements as a species possible [Atlas of the Living World](#)
