¹ Except for the 300-5, Recommended Max Connections is likely to be reached before this limit.

These guidelines show the relative power of SG appliances. Appropriate configurations can vary significantly from these guidelines and will depend on technical requirements.

WAN Optimization

Use this guide when a ProxySG is being used for WAN optimization with or without other functionality like forward proxy. Both SGOS Acceleration Edition and SGOS Proxy Edition can be used for WAN optimization. Special rules apply for sizing units running 'Mixed Use' loads - both WAN optimization and forward proxy. See Example 2.

Max WAN Bandwidth

Maximum WAN link speed appropriate for this model. Using a ProxySG on a WAN link that exceeds its maximum WAN link speed can result in suboptimal performance.

Recommended Max Connections

The recommended maximum number of connections. A rule of thumb is that each active user will require ten connections.

Clustering

Clusters of up to 20 ProxySGs can be created to handle substantially more traffic and users.

Client Manager for Proxy Client

Assumes a dedicated ProxySG appliance at 40% peak CPU load for servicing ProxyClients. Use of a dedicated ProxySG is recommended as a best practice. Always use SGOS Proxy Edition for any ProxyClient deployments requiring remote licensing. SGOS Acceleration Edition is sufficient for acceleration-only ProxyClient deployments.

Recommended Max ProxyClients Managed

Maximum number of ProxyClient instances connecting to a Client Manager, regardless of the features enabled on the ProxyClient (filtering, acceleration or both).

Licensing

ProxySGs are licensed based on concurrent client IP addresses only. Other values such as Max WAN Bandwidth and Recommended Max Connections are suggested based on the physical capacity of the system.

Licensed Client IPs

Licensed users are measured by the number of unique client IP addresses with open inbound TCP connections to the ProxySG. The measurement is instantaneous and concurrent. It is not based on the average over any time interval. The administrator can configure the appliance to either bypass connections from new users when the license limit is exceeded, to delay them
