in short ranges of actionable information which no competing solution can claim Plant descriptions are demoted in comparison to other herbals in favor of processing and dispensing details This approximate solution is based on fuzzy set analysis techniques integrated with linguistic universals a wide range of common statistics Pareto and Sukhotin scores Zipf slopes Indexes of Coincidence Agglutination and Synthesis and dozens of others and many home brewed fuzzy algorithms implemented in T SQL and VB Net after the inadequacy of many advanced data mining techniques was demonstrated Our methodology was validated when the project reached an inflection point beyond which we were able to predict the identities and properties of plants based on the text alone The project ended with plausible identification candidates for 121 of 126 herbal section plants and 7 others elsewhere in the manuscript far beyond that of other published solutions An incredible 100% of the 133 identified plants have dermatological uses These can be divided into prominent subtopics like treatment of bites anthelmintics rheumatism and other musculo skeletal ailments inflammatory skin disorders external and possibly menstrual bleeding excision of blemishes application of cosmetics and cures dispensable in baths The centerpiece of the manuscript is the Rosette Folio which depicts the grand design of a medieval bathhouse keyed to specific astrological timings also defined by satellite diagrams following a precedence hierarchy Each of these uses exhibit telltale polygraph correlations that fall into a handful of semantic hierarchies constructed from highly similar bases such as skin color based diagnostic criteria remedies solutions problems diseases plant parts and the like These findings require 2 volumes to demonstrate and another volume of data and other supplementary material Despite this complexity they culminate in a drastic simplification of the script and the first ever comprehensive translation of the Voynich Manuscript in Volume IV albeit at low resolution The first installment dedicated to linguistic analysis of the affixing system will be published concurrently with Vol II at which time the reference material in Vol III Dictionary Figures Tables and Other Supplementary Material will be made publicly available for free at the GitHub address <https://github.com/InfinidataLLC/Infinidata-Voynich-Manuscript-Project> *Cartilage* Brian K.
