Abstract During subnormality, a subnormal group is a group that is not normal but whose normalizer is the whole group. In this paper, we study the structure of subnormal groups and their normalizers. We prove that if G is a subnormal group of a finite group H , then G is a normal subgroup of H if and only if G is a normal subgroup of H and G is a normal subgroup of H . This result is a generalization of a theorem of Thompson (1960) and is a special case of a more general result of Thompson (1960).
