Life Sciences Frederick R. Adler, Miroslav Lovric, **Weight Function Methods in Fracture Mechanics** Xue-Ren Wu, Wu Xu, 2022-07-04 This book provides a systematic and standardized approach based on the authors over 30 years of research experience with weight function methods as well as the relevant literature Fracture mechanics has become an indispensable tool for the design and safe operation of damage tolerant structures in many important technical areas The stress intensity factor the characterizing parameter of the crack tip field is the foundation of fracture mechanics analysis The weight function method is a powerful technique for determining stress intensity factors and crack opening displacements for complex load conditions with remarkable computational efficiency and high accuracy The book presents the theoretical background of the weight function methods together with a wealth of analytical weight functions and stress intensity factors for two and three dimensional crack geometries many of these have been incorporated into national international standards and industrial codes of practice The accuracy of the results is rigorously verified and various sample applications are provided Accordingly the book offers an ideal reference source for graduate students researchers and engineers whose work involves fracture and fatigue of materials and structures who need not only stress intensity factors themselves but also efficient and reliable tools for obtaining them **Essential Math for AI** Hala Nelson, 2023-01-04 Many sectors and industries are eager to integrate AI and data driven technologies into their systems and operations But to build truly successful AI systems you need a firm grasp of the underlying mathematics This comprehensive guide bridges the current gap in presentation between the unlimited potential and applications of AI and its relevant mathematical foundations Rather than discussing dense academic theory author Hala Nelson surveys the mathematics necessary to thrive in the AI field focusing on real world applications and state of the art models You ll explore topics such as regression neural networks convolution optimization probability Markov processes differential equations and more within an exclusive AI context Engineers data scientists mathematicians and scientists will gain a solid foundation for success in the AI and math fields *Key Maths GCSE* David Baker, 2002-01-25 Developed for the AQA Specification revised for the new National Curriculum and the new GCSE specifications The Teacher File contains detailed support and guidance on advanced planning points of emphasis key words notes for non specialist useful supplementary ideas and homework sheets **Core Maths for Advanced Level** L. Bostock, S. Chandler, 2000 Since the launch of the Human Genome project in 1990 understanding molecular and clinical genetics has become an essential aspect of modern medical education Solid knowledge of genetics is now crucial to a host of healthcare professionals including primary care physicians nurses and physician assistants This third edition takes this crucial information and incorporates it into a student friendly format that focuses on the core concept of human genetics Each chapter uses the same problem based approach as the previous editions and addresses the important role of genetics and disease by integrating molecular and clinical genetics *Mathematical Models for Decision Making with Multiple Perspectives* Maria Isabel Gomes, Nelson Chibeles Martins, 2022-08-04 This book brings together in a single volume the fields of multicriteria decision

making and multiobjective optimization that are traditionally covered separately Both fields have in common the presence of multiple perspectives of looking at and evaluating decisions to be taken but they differ in the number of available alternatives Multicriteria approaches deal with decision processes where a finite number of alternatives have to be evaluated while in multiobjective optimization this number is infinite and the space of alternatives continuous This book is written for students of applied mathematics engineering and economics and management with no assumed previous knowledge on the subject as well as for practitioners in industry looking for techniques to support decision making The mathematical formalism is very low so that all materials are accessible to most readers Nonetheless a rich bibliography allows interested readers to access more technical literature The textbook is organized in eleven chapters each corresponding to a class of about two hours A comprehensive set of examples is presented allowing for a didactic approach when presenting the methodologies Each chapter ends with exercises that are designed to develop problem solving skills and to promote concepts retention
