

Recovering the Romanovs

Description of activity

Recovering the Romanovs is an excellent opening to any unit on human genetics. To complete the three parts of this module, approximately three 40-minute class periods will be required. Time will vary depending on the depth of the lesson. The activities may also be assigned for homework if Internet access is not available in the classroom.

Part I:

The students will be introduced to the Romanov family - the Tsar, Tsarina, and their five children. Students will learn that the youngest son Alexei inherited the sex-linked genetic disorder hemophilia and see how the disorder was passed through members of the royal family. Through computer links, students can learn more about the inheritance of hemophilia. The students also see something of the Romanov family's daily activities before hearing about the Russian Revolution and the execution of the Tsar and his family.

Part II:

Students will meet the woman called Anna Anderson who claimed to be Anastasia Romanov. They will use various types of evidence to compare the two women.

Part III:

Students will hear from a forensic pathologist called in to examine skeletal evidence found in a burial site in Yekaterinburg, Siberia. The site was thought to contain the remains of the Romanov family and their staff. Students then work through animations that allow them to count and analyze the evidence to determine the skeletons' gender and age. The students learn about the use of DNA technology in identification, and the difference between

DNA (mtDNA). They then link to the *Sequence Server* at the Dolan DNA Learning Center, Cold Spring Harbor Laboratory to compare the gravesite skeletons' mtDNA sequences with living relatives of the Tsarina and Tsar.

The final task is to determine whether Anna Anderson is indeed Anastasia. The students view and listen to videos about the mtDNA analysis of Anna Anderson's hair and intestinal tissue. Using real sequences from Anna Anderson's hair and intestinal tissue samples, students can solve the mystery of Anastasia.

Learning Outcomes

Part I:

Students will:

- Identify the members of the Romanov family and describe the situation in Russia that led to their assassination.
- Explain the concept of sex-linked inheritance and apply it to the genetic disorder hemophilia.
- Describe the disorder hemophilia and explain its symptoms and causes.
- Analyze a pedigree that traces hemophilia in the Romanov family and use a Punnett square to show how Alexei inherited hemophilia from his parents.

Part II:

Students will:

- Examine and analyze evidence, such as handwriting, ear and facial features, to compare Anna Anderson and Anastasia.
- Understand how several commonly used forensic tests are not able to provide conclusive evidence about Anna Anderson's claim to be Anastasia.
