Initial Value Methods for Boundary Value Problems: Theory and Application of Invariant Imbedding, 1973-08-15 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering

Global Analysis in Mathematical Physics Yuri Gliklikh, 2012-12-06 The first edition of this book entitled *Analysis on Riemannian Manifolds and Some Problems of Mathematical Physics* was published by Voronezh University Press in 1989 For its English edition the book has been substantially revised and expanded In particular new material has been added to Sections 19 and 20 I am grateful to Viktor L Ginzburg for his hard work on the translation and for writing Appendix F and to Tomasz Zastawniak for his numerous suggestions My special thanks go to the referee for his valuable remarks on the theory of stochastic processes Finally I would like to acknowledge the support of the AMS fSU Aid Fund and the International Science Foundation Grant NZBOOO which made possible my work on some of the new results included in the English edition of the book Voronezh Russia Yuri Gliklikh September 1995 Preface to the Russian Edition The present book is apparently the first in monographic literature in which a common treatment is given to three areas of global analysis previously considered quite distant from each other namely differential geometry and classical mechanics stochastic differential geometry and statistical and quantum mechanics and infinite dimensional differential geometry of groups of diffeomorphisms and hydrodynamics The unification of these topics under the cover of one book appears however quite

natural since the exposition is based on a geometrically invariant form of the Newton equation and its analogs taken as a fundamental law of motion

Global Analysis in Mathematical Physics I. U. E. Gliklikh, 1997 This book is the first in monographic literature giving a common treatment to three areas of applications of Global Analysis in Mathematical Physics previously considered quite distant from each other namely differential geometry applied to classical mechanics stochastic differential geometry used in quantum and statistical mechanics and infinite dimensional differential geometry fundamental for hydrodynamics The unification of these topics is made possible by considering the Newton equation or its natural generalizations and analogues as a fundamental equation of motion New general geometric and stochastic methods of investigation are developed and new results on existence uniqueness and qualitative behavior of solutions are obtained

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity
