Wastewater Engineering Metcalf & Eddy Inc., 2013-08-30 *Wastewater Engineering Treatment and Resource Recovery* 5 e is a thorough update of McGraw Hill's authoritative book on wastewater treatment. No environmental engineering professional or civil or environmental engineering major should be without a copy of this book describing the rapidly evolving field of wastewater engineering. Technological and regulatory changes that have occurred over the last ten years in this discipline including a new view of a wastewater as a source of energy, nutrients and potable water, more stringent discharge requirements related to nitrogen and phosphorus, enhanced understanding of the fundamental microbiology and physiology of the microorganisms responsible for the removal of nitrogen and phosphorus and other constituents, an appreciation of the importance of the separate treatment of return flows with respect to meeting more stringent standards for nitrogen removal and opportunities for nutrient recovery, increased emphasis on the treatment of sludge and the management of biosolids, increased awareness of carbon footprints, impacts and greenhouse gas emissions and an emphasis on the development of energy neutral or energy positive wastewater plants through more efficient use of chemical and heat energy in wastewater. This revision contains a strong focus on advanced wastewater treatment technologies and stresses the reuse aspects of wastewater and biosolids.

Biomass Maggy Ndombo Benteke Momba,2010-08-12 Due to demands placed on natural resources globally and subsequent deterioration of the environment there is a need to source and develop appropriate technology to satisfy this requirement For decades mankind has largely depended on natural resources such as fossil fuels to meet the ever increasing energy demands Realizing the finite nature of these resources emphasis is now shifting to investigating alternate energy source governed by environmentally friendly principles The abundance of biomass and associated favorable techno economics has recently changed global perceptions of harnessing biomass as a valuable resource rather than a waste To this end this book aims to make a contribution to exploring further this area of biomass research and development in the form of a compilation of chapters and covering areas of ecological status of different types of biomass and the roles they play in ecosystems current status of biomass utilization and deriving energy and other value added products from biomass In this context biomass can be defined as large plants and trees and different groups of microorganisms This book will serve as an invaluable resource for scientists and environmental managers in planning solutions for sustainable development

Advanced Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamas, 2007-11-10 The past thirty years have

witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken
