

Anatomy of a Wave Worksheet **Answers**

Objective: Identify the parts of a wave and draw your own diagrams of waves.

Background: Many types of waves exist, including electromagnetic waves and mechanical waves. Waves move in different ways and have different properties.

Part 1

In the diagram below, identify the parts of a wave by using the provided definitions.

- # 5 = **crest** The highest point of the wave above the line of origin.
- # 2 = **trough** The lowest point of the wave below the line of origin.
- # 1 = **line of origin** Signifies the original position of the medium.
- # 3 = **wavelength** The distance between two consecutive crests.
- # 4 = **amplitude** The distance from the line of origin to a crest or trough of a wave.

Part 2

On separate sheets of graph paper, draw four different waves with the following measurements. Label the parts and include the measurements.

wave #	crest	trough	wavelength
1	1 cm	1 cm	2 cm
2	3.5 cm	3.5 cm	2.5 cm
3	.5 cm	.5 cm	3 cm
4	2 cm	2cm	.5 cm

Concluding question: State which wave you think has the *highest frequency* and which might have the *lowest frequency*. Explain the reasons for your selections.

#4 has the highest frequency because it has the shortest wavelength, and frequency is inversely proportional to wavelength.

#3 has the lowest frequency because it has the longest wavelength, and frequency is inversely proportional to wavelength.

Seduced by Logic Robyn Arianrhod, 2012-09-01 Newton's explanation of the natural law of universal gravity shattered the way mankind perceived the universe and hence it was not immediately embraced After all how can anyone warm to a force that cannot be seen or touched But for two women separated by time and space but joined in their passion for Newtonian physics the intellectual power of that force drove them to great achievements Brilliant determined and almost entirely self taught they dedicated their lives to explaining and disseminating Newton's discoveries Robyn Arianrhod's *Seduced by Logic* tells the story of Emilie du Chatelet and Mary Somerville who despite living a century apart were connected by their love for mathematics and their places at the heart of the most advanced scientific society of their age When Newton published his revolutionary theory of gravity in his monumental *Principia* of 1687 most of his Continental peers rejected it for its reliance on physical observation and mathematical insight instead of religious or metaphysical hypotheses But the brilliant French aristocrat and intellectual Emilie du Chatelet and some of her early eighteenth century Enlightenment colleagues including her lover Voltaire realized the *Principia* had changed everything marking the beginning of theoretical science as a predictive quantitative and secular discipline Emilie devoted herself to furthering Newton's ideas in France and her translation of the *Principia* is still the accepted French version of this groundbreaking work Almost a century later in Scotland Mary Somerville taught herself mathematics and rose from genteel poverty to become a world authority on Newtonian physics She was felled by the famous French Newtonian Pierre Simon Laplace whose six volume *Celestial Mechanics* was considered the greatest intellectual achievement since the *Principia* Laplace's work was the basis of Mary's first book *Mechanism of the Heavens* it is a bittersweet irony that this book written by a woman denied entry to university because of her gender remained an advanced university astronomy text for the next century Combining biography history and popular science *Seduced by Logic* not only reveals the fascinating story of two incredibly talented women but also brings to life a period of dramatic political and scientific change With lucidity and skill
