Visualizing Technology Chapter 1:

The Engine of Visualization Patrick Maynard, 2018-08-06 In the first philosophical book wholly about photography Patrick Maynard dispels some basic persistent confusions by treating photography as a technology a way to enhance and filter human power Once photography is understood as a kind of technology Maynard argues insights about technology may be applied to provide the general perspective on photography that has been missing Visualizing Technology Debra Geoghan, 2023 Skin Theory Cristina Mejia Visperas, 2022-07-26 During the postwar period experiments on prison populations were standard practice among many universities public health agencies and major pharmaceutical

manufacturers across the United States Thus the operative question in *Skin Theory* is What was it about the US prison that made it so amenable to medical science research A visual study for critically understanding entwined sites of imprisonment and scientific knowledge production *Skin Theory* speaks directly to the crucial moments immediately before two large American industries one carceral and the other pharmaceutical saw their fantastic rise and dominance honing in on when their interests and operations came together in explicit ways It revisits the notorious dermatological experiments conducted between 1952 and 1974 at Holmesburg Prison Philadelphia analyzing skin in its technological spatial and discursive dimensions to illustrate a profound antagonism between knowledge and freedom made visible through the body of the captive test subject a racialized subject whose boundless availability to scientific and cultural representation complicates the very notion of skin This study offers an important reframing of critical approaches to race in histories of science medicine and technology redefining science as already a fundamentally racial project A visual analysis of how medical science and incarceration together formed a race making technology and geography reconfiguring the nation s long history of captivity from slavery to mass incarceration *Skin Theory* shifts from issues of scientific racism to the scientific rationality of racism itself

Competition Law and Policy in Digital Markets Maria Ioannidou, Bingwan Xiong, 2025-03-01 The advent of digital technologies has transformed markets and resulted in unprecedented levels of market concentration with a handful of digital giants controlling the provision of many goods and services Against these changing market dynamics *Competition Law and Policy in Digital Markets A Comparative Analysis of the EU and China* provides a critical comparative analysis of the application of competition law in digital markets in the EU and China The book deciphers how these two key competition law jurisdictions apply their respective competition laws against different digital giants and the potential impact of those applications in the evolution of digital markets This book first maps the characteristics of digital markets and the challenges they raise for competition law enforcement and second critically discusses decisional practice and policy developments in the EU and China The discussion identifies potential competition law problems in the digital economy and covers various types of anti competitive conduct at the intersection of consumer data protection and competition law It also identifies contentious cases querying whether competition law can act as a gap filler or whether other regulatory tools are better suited to address

such problems Pioneering and timely Competition Law and Policy in Digital Markets examines the challenges posed to competition law enforcement by these new dynamics The similarities and divergent approaches between competition law enforcers in the EU and China are examined in a bid to contribute to a more transparent debate between the two

Looking Within Deborah Blizzard, 2007-08-03 An ethnographic study of fetoscopy that considers both the broader cultural context of this high risk obstetrical procedure and the patient s individual experience In Looking Within Deborah Blizzard examines the high risk in utero surgery known as fetoscopy considering it as both cutting edge medical technology and as a sociocultural construction of patients their social networks and medical providers She looks at the way individual experiences shape these procedures and how fetoscopy affects individuals both patients and providers on a personal emotional level Based on an eleven month ethnographic study of the fetoscopy practice at a community based hospital and further interviews with former patients Looking Within offers a vivid picture of the sometimes

conflicted often desperate and always emotional lives of those undergoing fetoscopy and challenges current assumptions about normal and appropriate pregnancy experiences To convey the complex reality of fetoscopy Blizzard draws from the experiences of the real patients she interviewed for the book to present the fictional case of Melinda and Joe taking them through the entire process from diagnosis to decision to outcome She then discusses the emergence of fetoscopy as an accepted form of high risk obstetrical care how fetoscopy programs are established at hospitals and why otherwise healthy women consent to surgery Blizzard examines the use of fetoscopy in single fetus and in twin pregnancies looking at how religion culture society and medical science inform any understanding of who or what is in utero a baby a tumor a mass She also discusses definitions of loss and success and the narratives patients and their social networks construct to make sense of them Looking Within will help physicians and nurses improve the development and delivery of fetoscopy procedures help patients understand this new technology and help scholars evaluate fetoscopy's bioethical social and cultural implications
