The Language Of Mathematics:

The Language of Mathematics Keith Devlin, 2000-03-13 Taking the reader on a wondrous journey through the invisible universe that surrounds us a universe made visible by mathematics Devlin shows us what keeps a jumbo jet in the air explains how we can see and hear a football game on TV and allows us to predict the weather the behavior of the stock market and the outcome of elections Microwave ovens telephone cables children s toys pacemakers automobiles and computers all operate on mathematical principles Far from a dry and esoteric subject mathematics is a rich and living part of our culture

The Language of Mathematics Bill Barton, 2007-12-24 The book emerges from several contemporary concerns in mathematics language and mathematics education However the book takes a different stance with respect to language by combining discussion of linguistics and mathematics using examples from each to illustrate the other The picture that emerges is of a subject that is much more contingent much more relative much more subject to human experience than is usually accepted Another way of expressing this is that the thesis of the book takes the idea of mathematics as a human creation and using the evidence from language comes to more radical conclusions than most writers allow

The Language of Mathematics Mohan Ganesalingam, 2013-03-14 The Language of Mathematics was awarded the E W Beth Dissertation Prize for outstanding dissertations in the fields of logic language and information It innovatively combines techniques from linguistics philosophy of mathematics and computation to give the first wide ranging analysis of mathematical language It focuses particularly on a method for determining the complete meaning of mathematical texts and on resolving technical deficiencies in all standard accounts of the foundations of mathematics The thesis does far more than is required for a PhD it is more like a lifetime s work packed into three years and is a truly exceptional achievement Timothy Gowers

Bernd-Olaf Küppers,2022-06-01 This book by an eminent scientist and philosopher provides strong evidence for the claim that language is a general principle of Nature rooted exclusively in physical and chemical laws The author s radical idea inevitably leads us to view the essence origin and evolution of life in a completely new light It shifts the coordinates of our scientific world view in favor of an overarching concept of language that is able to bridge the gap between matter and mind At the same time it removes a blind spot in the Darwinian concept of evolution To justify this far reaching idea the book takes a long and deep look at our scientific and philosophical thinking at language as such at science s claim to truth and at its methods unity limits and perspectives These are the cornerstones structuring the book into six thematically self contained chapters rounded off by an epilogue that introduces the new topic of Nature s semantics The range of issues covered is a testimony to how progress in the life sciences is transforming the whole edifice of science from physics to biology and beyond The book is aimed at a broad academic and general readership it requires no mathematical expertise *Language and*

The Language of Nature Geoffrey Gorham, Benjamin Hill, Edward Slowik, C. Kenneth Waters, 2016-06-15 Galileo's dictum that the book of nature is written in the language of mathematics is emblematic of the accepted view that the scientific revolution hinged on the conceptual and methodological integration of mathematics and natural philosophy Although the mathematization of nature is a distinctive and crucial feature of the emergence of modern science in the seventeenth century this volume shows that it was a far more complex contested and context dependent phenomenon than the received historiography has indicated and that philosophical controversies about the implications of mathematization cannot be understood in isolation from broader social developments related to the status and practice of mathematics in various commercial political and academic institutions Contributors Roger Ariew U of South Florida Richard T W Arthur McMaster U Lesley B Cormack U of Alberta Daniel Garber Princeton U Ursula Goldenbaum Emory U Dana Jalobeanu U of Bucharest Douglas Jesseph U of South Florida Carla Rita Palmerino Radboud U Nijmegen and Open U of the Netherlands Eileen Reeves Princeton U Christopher Smeenk Western U Justin E H Smith U of Paris 7 Kurt Smith Bloomsburg U of Pennsylvania
