The Intelligent Web Sanel Roelse, 2014-11-26

Introduction Data warehousing is a success judging by its 25 year history of use across all industries Business intelligence met the needs it was designed for to give non technical people within the organization access to important shared data During the same period that data warehousing and BI matured the automation and instrumenting of almost all processes and activities changed the data landscape in most companies Where there were only a few applications and minimal monitoring 25 years ago there is ubiquitous computing and data available about every activity today Data warehouses have not been able to keep up with business demands for new sources of information new types of data more complex analysis and greater speed Companies can put this data to use in countless ways but for most it remains uncollected or unused locked away in silos within IT There has been a gradual maturing of data use in organizations In the early days of BI it was enough to provide access to core financial and customer transactions Better access enabled process changes and these led to the need for more data and more varied uses of information These changes put increasing strain on information processing and delivery capabilities that were designed under assumptions of stability and common use Most companies now have a backlog of new data and analysis requests that BI groups are struggling to meet Big data is not simply about growing data volumes it s also about the fact that the data being collected today is different in ways that make it unwieldy for conventional databases and BI tools Big data is also about new technologies that were developed to support the storage retrieval and processing of this new data The technologies originated in the world of web applications and internet based companies but they are now spreading into enterprise applications of all sorts New technology coupled with new data enables new practices like real time monitoring of operations across retail channels supply chain practices at finer grain and faster speed and analysis of customers at the level of individual activities and behaviors Until recently large scale data collection and analysis capabilities like these would have required a Wal Mart sized investment limiting them to large organizations These capabilities are now available to all regardless of company size or budget This is creating a rush to adopt big data technologies As the use of big data grows the need for data management will grow Many organizations already struggle to manage existing data Big data adds complexity which will only increase the challenge The combination of new data and new technology requires new data management capabilities and processes to capture the promised long term value Wal Mart handles more than a million customer transactions each hour and imports those into databases estimated to contain more than 2.5 petabytes of data Radio frequency identification RFID systems used by retailers and others can generate 100 to 1 000 times the data of conventional bar code systems Facebook handles more than 250 million photo uploads and the interactions of 800 million active users with more than 900 million objects pages groups etc each day More than 5 billion people are calling texting tweeting and browsing on mobile phones worldwide Organizations are inundated with data terabytes and petabytes of it To put it in context 1 terabyte contains 2 000 hours of

CD quality music and 10 terabytes could store the entire US Library of Congress print collection Exabytes zettabytes and yottabytes definitely are on the horizon Data is pouring in from every conceivable direction from operational and transactional systems from scanning and facilities management systems from inbound and outbound customer contact points from mobile media and the Web

Information, Freedom and Property Mireille Hildebrandt, Bibi van den Berg, 2016-07-01 This book addresses issues on the nexus of freedom of and property in information while acknowledging that both hiding and exposing information may affect our privacy It inquires into the physics the technologies the business models the governmental strategies and last but not least the legal frameworks concerning access organisation and control of information It debates whether it is in the very nature of information to be either free or monopolized or both Analysing upcoming power structures new types of colonization and attempts to replace legal norms

with techno nudging this book also presents the idea of an infra ethics capable of pre-empting our pre-emption. It discusses the interrelations between open access, the hacker ethos, the personal data economy and freedom of information, highlighting the ephemeral but pivotal role played by information in a data-driven society. This book is a must-read for those working on the contemporary dimensions of freedom of information, data protection and intellectual property rights.

Media Logic(s) Revisited Cajo Thimm, Mario Anastasiadis, Jessica Einspänner-Pflock, 2017-12-12 This volume provides new approaches to the concept of media logics developed by Altheide and Snow by drawing on theoretical and empirical perspectives from international scientists working in the field of communications, media, political science and sociology. In an increasingly digitized and globalized world, powerful media structures and technologies influence our daily lives in many respects. It is not only mass media but poly-media channels that become more and more contextualized in everyday lives. Therefore, it is necessary to revisit the theory of media logics, which focuses on the strong intercorrelation of media technologies, media institutions and media power. Media Logic(s) Revisited attends to this by critically reflecting on the idea of media logic, a much-needed input in light of current developments and strong cultural embedding of media in various social contexts.

Deeper City Joe Ravetz, 2020-05-19 Deeper City is the first major application of new thinking on deeper complexity applied to grand challenges such as runaway urbanization, climate change and rising inequality. The author provides a new framework for the collective intelligence, the capacity for learning and synergy in many-layered cities, technologies, economies, ecologies and political systems. The key is in synergistic mapping and design, which can move beyond 'smart' winner-takes-all competition towards wiser human systems of cooperation, where winners are all. Forty distinct pathways from smart to wise are mapped in Deeper City and presented for strategic action, ranging from local neighbourhoods to global finance. As an atlas of the future and resource library of pathway mappings, this book expands on the author's previous work, City Region 2020. From a decade of development and testing, Deeper City combines visual thinking with a narrative style and practical guidance. This book will be indispensable for those seeking a sustainable future: students, politicians, planners, systems designers, activists, engineers and researchers. A new postscript looks at how these methods can work with respect to the 2020 pandemic and asks: How can we turn crisis towards transformation?

Thinking Machines Luke Dormehl, 2017-03-07 A fascinating look at Artificial Intelligence from its humble Cold War beginnings to the dazzling future that is just around the corner. When most of us think about Artificial Intelligence, our minds go straight to cyborgs, robots and sci-fi thrillers where machines take over the world. But the truth is that Artificial Intelligence is already among us. It exists in our smartphones, fitness trackers and refrigerators that tell us when the milk will expire. In some ways, the future people dreamed of at the World's Fair in the 1960s is already here. We're teaching our machines how to think like humans and they're learning at an incredible rate. In Thinking Machines, technology journalist Luke Dormehl takes you through the history of AI and how it makes up the foundations of the machines that think for us today. Furthermore, Dormehl speculates on the incredible and possibly terrifying

future that is much closer than many would imagine This remarkable book will invite you to marvel at what now seems commonplace and to dream about a future in which the scope of humanity may need to broaden itself to include intelligent machines

Digital DNA Peter F. Cowhey, Jonathan D. Aronson, 2017-06-30 Innovation in information and production technologies is creating benefits and disruption profoundly altering how firms and markets perform Digital DNA provides an in depth examination of the opportunities and challenges in the fast changing global economy and lays out strategies that countries and the international community should embrace to promote robust growth while addressing the risks of this digital upheaval Wisely guiding the transformation in innovation is a major challenge for global prosperity that affects everyone Peter Cowhey and Jonathan Aronson demonstrate how the digital revolution is transforming the business models of high tech industries but also of traditional agricultural manufacturing and service sector firms The rapidity of change combines with the uncertainty of winners and losers to create political and economic tensions over how to adapt public policies to new technological and market surprises The logic of the policy trade offs confronting society and the political economy of practical decision making is explored through three developments The rise of Cloud Computing and trans border data flows international collaboration to reduce cybersecurity risks and the consequences of different national standards of digital privacy protection The most appropriate global strategies will recognize that a significant diversity in individual national policies is inevitable However because digital technologies operate across national boundaries there is also a need for a common international baseline of policy fundamentals to facilitate quasi convergence of these national policies Cowhey and Aronson's examination of these dynamic developments lead to a measured proposal for authoritative soft rules that requires governments to create policies that achieve certain objectives but leaves the specific design to national discretion These rules should embrace mechanisms to work with expert multi stakeholder organizations to facilitate the implementation of formal agreements enhance their political legitimacy and technical expertise and build flexible learning into the governance regime The result will be greater convergence of national policies and the space for the new innovation system to flourish

Architecting Fail-Safe Supply Networks Shabnam Rezapour, Amirhossein Khosrojerdi, Golnoosh

Rasoulifar, Janet K. Allen, Jitesh H. Panchal, Ramakrishnan S. Srinivasan, Jeffrey D. Tew, Farrokh Mistree, 2018-09-06 A fail safe supply network is designed to mitigate the impact of variations and disruptions on people and corporations This is achieved by 1 developing a network structure to mitigate the impact of disruptions that distort the network structure and 2 planning flow through the network to neutralize the effects of variations In this monograph we propose a framework develop mathematical models and provide examples of fail safe supply network design We show that contrary to current thinking as embodied in the supply network literature disruption management decisions made at the strategic network design level are not independent from variation management decisions made at the operational level Accordingly we suggest that it is beneficial to manage disruptions and variations concurrently in supply networks This is achieved by architecting fail safe

supply networks which are characterized by the following elements reliability robustness flexibility structural controllability and resilience Organizations can use the framework presented in this monograph to manage variations and disruptions Managers can select the best operational management strategies for their supply networks considering variations in supply and demand and identify the best network restoration strategies including facility fortification backup inventory flexible production capacity flexible inventory and transportation route reconfiguration The framework is generalizable to other complex engineered networks

Big Data and Computational Intelligence in Networking Yulei Wu, Fei Hu, Geyong Min, Albert Y. Zomaya, 2017-12-14 This book presents state of the art solutions to the theoretical and practical challenges stemming from the leverage of big data and its computational intelligence in supporting smart network operation management and optimization In particular the technical focus covers the comprehensive understanding of network big data efficient collection and management of network big data distributed and scalable online analytics for network big data and emerging applications of network big data for computational intelligence
