ROUGH TERRAIN MOBILITY ... An auxiliary hydraulic system provides superior support and level adjustment. The boom is in place over the ground surface. An optional hydraulic differential for the rear axle is also available. New gear and hydraulic pump design have provided more efficiency when traveling.

TERRAIN-ADJUSTED CAB DESIGNED FOR OPERATOR COMFORT ... There is fewer vibration for the operator as the cab works with the boom, keeping the operator facing forward at all times. The cab features a large forged, steel weight, a 36° rotation from windshield and sliding side and rear windows for ventilation. Radiating and noise controls for quality of work and are designed in a consistent Grove pattern for operator acceptance.

SMOOTH POWER UPFS ... Grove's planetary gear drive, torque converter and pump, is standard. Most and working speeds can be controlled from seat to clear from 2000 to 100 RPM.

TOOL STORAGE is provided in a large storage bin for tool located forward in the chassis deck.

THE HIGHER LOAD MOMENT INDICATOR AND AUTO-TWO-BLINDER SYSTEM improves operator's operational factors of the crane and enhances their work when they together while providing the operator with a continuous visual display of crane load. Directly measuring the weight and moment of crane load with load cells, an integral load and moment warning system alerts the operator if an overload or two-blinder condition exists. After the Grove automatic de-power circuit, during the lift flow, these functions allow operator to go on with a two-blinder operation, providing operation of only those crane functions that will improve the situation.
