Statistics and Finance David Ruppert, 2014-02-26 This textbook emphasizes the applications of statistics and probability to finance Students are assumed to have had a prior course in statistics but no background in finance or economics The basics of probability and statistics are reviewed and more advanced topics in statistics such as regression ARMA and GARCH models the bootstrap and nonparametric regression using splines are introduced as needed The book covers the classical methods of finance such as portfolio theory CAPM and the Black Scholes formula and it introduces the somewhat newer area of behavioral finance Applications and use of MATLAB and SAS software are stressed The book will serve as a text in courses aimed at advanced undergraduates and masters students in statistics engineering and applied mathematics as well as quantitatively oriented MBA students Those in the finance industry wishing to know more statistics could also use it for self study

Digital Twins Christoph Herwig, Ralf Pörtner, Johannes Möller, 2021-04-25 This is the first of two volumes that together provide an overview of the latest advances in the generation and application of digital twins in bioprocess design and optimization Both processes have undergone significant changes over the past few decades moving from data driven approaches into the 21st century digitalization of the bioprocess industry Moreover the high demand for biotechnological products calls for efficient methods during research and development as well as during tech transfer and routine manufacturing In this regard one promising tool is the use of digital twins which offer a virtual representation of the bioprocess They reflect the mechanistics of the biological system and the interactions between process parameters key performance indicators and product quality attributes in the form of a mathematical process model Furthermore digital twins allow us to use computer aided methods to gain an improved process understanding to test and plan novel bioprocesses and to efficiently monitor them This book explains the mathematical structure of digital twins their development and the model's respective parts as well as concepts for the knowledge driven generation and structural variability of digital twins Covering fundamentals as well as applications the two volumes offer the ideal introduction to the topic for researchers in academy and industry alike
