Designed for students, educators, and researchers, this volume presents a planned study of fundamental environmental concepts and processes integrating both theoretical and applied aspects. The book begins with a strong foundation in environmental chemistry and systematically covers the essential components of the environment including the biosphere, hydrosphere, lithosphere, and atmosphere. It emphasizes ecological principles, classification of ecosystems, and the functioning of biogeochemical cycles, highlighting the circulation of nitrogen, carbon, phosphorus, hydrogen, and oxygen, which are vital for sustaining life on Earth. Serves as a foundational collection for neuroscience, neurology, and nutrition researchers illustrating the importance of nutrition and diet in eye health and function. Provides a common language for readers to discuss how nutritional factors and related diseases and syndromes affect the eye. Features new chapters on infectious diseases of the eye where nutrition is a factor. Discusses animal model studies, dietary supplements, natural dietary extracts from around the world, and age-related changes in ocular health.
