Recent Progress in General Topology II M. Husek, J. van Mill, 2002-11-13 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade It follows freely the previous edition North Holland 1992 Open Problems in Topology North Holland 1990 and Handbook of Set Theoretic Topology North Holland

1984 The book was prepared in connection with the Prague Topological Symposium held in 2001. During the last 10 years the focus in General Topology changed and therefore the selection of topics differs slightly from those chosen in 1992. The following areas experienced significant developments: Topological Groups, Function Spaces, Dimension Theory, Hyperspaces, Selections, Geometric Topology including Infinite Dimensional Topology and the Geometry of Banach Spaces. Of course not every important topic could be included in this book. Except surveys the book contains several historical essays written by such eminent topologists as R. D. Anderson, W. W. Comfort, M. Henriksen, S. Mardešić, J. Nagata, M. E. Rudin, J. M. Smirnov. Several reminiscences of L. Vietoris are added. In addition to extensive author and subject indexes a list of all problems and questions posed in this book are added. List of all authors of surveys: A. Arhangel'skii, J. Baker and K. Kunen, H. Bennett and D. Lutzer, J. Dijkstra and J. van Mill, A. Dow, E. Glasner, G. Godefroy, G. Gruenhage, N. Hindman and D. Strauss, L. Hola and J. Pelant, K. Kawamura, H. P. Kuenzi, W. Marciszewski, K. Martin and M. Mislove and M. Reed, R. Pol and H. Toruńczyk, D. Repovš and P. Semenov, D. Shakhmatov, S. Solecki, M. Tkachenko.

Regularity Techniques for Elliptic PDEs and the Fractional Laplacian Pablo Raúl Stinga, 2024-07-02. Regularity Techniques for Elliptic PDEs and the Fractional Laplacian presents important analytic and geometric techniques to prove regularity estimates for solutions to second order elliptic equations both in divergence and nondivergence form and to nonlocal equations driven by the fractional Laplacian. The emphasis is placed on ideas and the development of intuition while at the same time being completely rigorous. The reader should keep in mind that this text is about how analysis can be applied to regularity estimates. Many methods are nonlinear in nature but the focus is on linear equations without lower order terms thus avoiding bulky computations. The philosophy underpinning the book is that ideas must be flushed out in the cleanest and simplest ways showing all the details and always maintaining rigor. Features: Self contained treatment of the topic. Bridges the gap between upper undergraduate textbooks and advanced monographs to offer a useful accessible reference for students and researchers. Replete with useful references.

The Dynamics of Physiologically Structured Populations Johan A. Metz, Odo Diekmann, 2014-03-11 **An Introduction to Semiflows**

Albert J. Milani, Norbert J. Koks, 2004-10-14. This book introduces the class of dynamical systems called semiflows which includes systems defined or modeled by certain types of differential evolution equations (DEEs). It focuses on the basic results of the theory of dynamical systems that can be extended naturally and applied to study the asymptotic behavior of the solutions of DEEs. The author System Identification and Adaptive Control Yiannis Boutalis, Dimitrios Theodoridis, Theodore Kottas, Manolis A. Christodoulou, 2014-04-23. Presenting current trends in the development and applications of intelligent systems in engineering this monograph focuses on recent research results in system identification and control. The recurrent neurofuzzy and the fuzzy cognitive network (FCN) models are presented. Both models are suitable for partially known or unknown complex time varying systems. Neurofuzzy Adaptive Control contains rigorous proofs of its statements which result in concrete conclusions for the selection of the design parameters of the algorithms presented. The neurofuzzy model

combines concepts from fuzzy systems and recurrent high order neural networks to produce powerful system approximations that are used for adaptive control The FCN model stems from fuzzy cognitive maps and uses the notion of concepts and their causal relationships to capture the behavior of complex systems The book shows how with the benefit of proper training algorithms these models are potent system emulators suitable for use in engineering systems All chapters are supported by illustrative simulation experiments while separate chapters are devoted to the potential industrial applications of each model including projects in contemporary power generation process control and conventional benchmarking problems Researchers and graduate students working in adaptive estimation and intelligent control will find Neurofuzzy Adaptive Control of interest both for the currency of its models and because it demonstrates their relevance for real systems The monograph also shows industrial engineers how to test intelligent adaptive control easily using proven theoretical results

Stochastic Processes and Calculus Uwe Hassler, 2015-12-12 This textbook gives a comprehensive introduction to stochastic processes and calculus in the fields of finance and economics more specifically mathematical finance and time series econometrics Over the past decades stochastic calculus and processes have gained great importance because they play a decisive role in the modeling of financial markets and as a basis for modern time series econometrics Mathematical theory is applied to solve stochastic differential equations and to derive limiting results for statistical inference on nonstationary processes This introduction is elementary and rigorous at the same time On the one hand it gives a basic and illustrative presentation of the relevant topics without using many technical derivations On the other hand many of the procedures are presented at a technically advanced level for a thorough understanding they are to be proven In order to meet both requirements jointly the present book is equipped with a lot of challenging problems at the end of each chapter as well as with the corresponding detailed solutions Thus the virtual text augmented with more than 60 basic examples and 40 illustrative figures is rather easy to read while a part of the technical arguments is transferred to the exercise problems and their solutions

The Elements of Polymer Science and Engineering Alfred Rudin, 2012-12-02 This introductory text is intended as the basis for a two or three semester course in synthetic macromolecules It can also serve as a self instruction guide for engineers and scientists without formal training in the subject who find themselves working with polymers For this reason the material covered begins with basic concepts and proceeds to current practice where appropriate Serves as both a textbook and an introduction for scientists in the field Problems accompany each chapter

Linear Partial Differential Equations and Fourier Theory Marcus Pivato, 2010-01-07 Do you want a rigorous book that remembers where PDEs come from and what they look like This highly visual introduction to linear PDEs and initial boundary value problems connects the math to physical reality all the time providing a rigorous mathematical foundation for all solution methods Readers are gradually introduced to abstraction the most powerful tool for solving problems rather than simply drilled in the practice of imitating solutions to given examples The book is therefore ideal for students in mathematics and physics who require a more

theoretical treatment than given in most introductory texts Also designed with lecturers in mind the fully modular presentation is easily adapted to a course of one hour lectures and a suggested 12 week syllabus is included to aid planning Downloadable files for the hundreds of figures hundreds of challenging exercises and practice problems that appear in the book are available online as are solutions

Spectral Synthesis, 1976-06-28 Spectral Synthesis *Automatic Sequences* Jean-Paul Allouche, Jeffrey Shallit, 2003-07-21 Uniting dozens of seemingly disparate results from different fields this book combines concepts from mathematics and computer science to present the first integrated treatment of sequences generated by finite automata The authors apply the theory to the study of automatic sequences and their generalizations such as Sturmian words and k regular sequences And further they provide applications to number theory particularly to formal power series and transcendence in finite characteristic physics computer graphics and music Starting from first principles wherever feasible basic results from combinatorics on words numeration systems and models of computation are discussed Thus this book is suitable for graduate students or advanced undergraduates as well as for mature researchers wishing to know more about this fascinating subject Results are presented from first principles wherever feasible and the book is supplemented by a collection of 460 exercises 85 open problems and over 1600 citations to the literature

Animal Contests Ian C. W. Hardy, Mark Briffa, 2013-05-30 Contests are an important aspect of the lives of diverse animals from sea anemones competing for space on a rocky shore to fallow deer stags contending for access to females Why do animals fight What determines when fights stop and which contestant wins Addressing fundamental questions on contest behaviour this

volume presents theoretical and empirical perspectives across a range of species The historical development of contest research the evolutionary theory of both dyadic and multiparty contests and approaches to experimental design and data analysis are discussed in the first chapters This is followed by reviews of research in key animal taxa from the use of aerial displays and assessment rules in butterflies and the developmental biology of weapons in beetles through to interstate warfare in humans The final chapter considers future directions and applications of contest research making this a comprehensive resource for both graduate students and researchers in the field
