### **CMOS RF and mm-Wave Transceivers and Synthesizers** Bharatha Kumar Thangarasu, Nagarajan

Mahalingam, Kaixue Ma, Kiat Seng Yeo, 2025-10-14 Power consumption has become a critical concern in RF mm wave integrated circuit IC design thanks to new applications from 5G mobile computing artificial intelligence and the Internet of Things However big challenges lie ahead for chip designers when they choose to develop ICs using silicon technology for low power and high data rate applications This is because silicon technology suffers from undesirable energy dissipation due to its lossy substrate and high resistive wiring loss at GHz frequencies Nonetheless silicon remains the most suitable material satisfying the demands of a rapidly growing semiconductor market through low fabrication cost and ease of achieving system on chip or system in package integration While long being neglected low power RF mm wave design has vaulted to the forefront of attention in recent years due to the demand for ultra low power transceivers to achieve sustainability Designing genuinely ubiquitous transceivers for these new applications requires innovations in both system architecture and circuit implementation This book closes the gap between a typical textbook with theories that are difficult to understand and a design oriented book that offers little insight into actual theories It evaluates and discusses different circuit topologies receiver and transmitter architectures phase locked loop performance metrics phase noise analysis and sub system level designs that have yet to be reported in other books
