3. List any four advantages of DBMS.

Ans:

- a) Reduction in Redundancy
- b) Improved Consistency
- c) Improved Availability

- e) User Friendly

4. Explain the concept of Candidate Key, Primary Key and Alternate Key with the help of a suitable example.

Ans:

a) **Candidate Key:** In a table, there may be more than one field that uniquely identifies a record. All such fields are called candidate keys.

b) **Primary Key:** A Primary Key is one of the candidate keys. A table may have more than one candidate keys but definitely has one and only one primary key. c) **Alternate**

Key: Alternate key is candidate key of a table which is not selected as the primary key

Example: For a table with RollNo and Admission_no, Name, Class, Sec, Dues, if RollNo, Admission_No may be used to uniquely identify each row in this Table, so both are candidate keys. Then if we use Admission_No as the Primary Key, the other Candidate Key RollNo is the Alternate Key

5. Define Referential Integrity.

Ans Referential Integrity is used to check that data entered in one relation is consistent with the data entered in another relation.

6. Differentiate between DDL and DML.

Ans:

DDL is used to define structure and constraints of table

DML is used to insert, modify and delete data in a table.

DDL – Create table, Alter table, Drop table

DML- Insert, Update, Delete

7. Explain important terminologies of RDBMS.

Ans:

- a) **Domain or Type of data:** Collection of possible values from which the type of data for a column is derived.
- b) **Tables or Relation:** A two-dimensional representation of data using rows and columns. The tables in a database are generally related to each other. Interrelated

From Active Data Management to Event-Based Systems and More Kai Sachs, Ilia Petrov, Pablo Guerrero, 2010-11-18 Data management has evolved over the years from being strictly associated with database systems through active databases to become a topic that has grown beyond the scope of a single field encompassing a large range of subjects such as distributed systems event driven systems and peer to peer and streaming systems The present collection of works which sheds light on various facets of data management is dedicated to Prof Alejandro Buchmann on the occasion of his 60th birthday His scientific path looks back on more than thirty years of successful academic life and high impact research With this book we celebrate Prof Buchmann's vision and achievements

Object Orientation with Parallelism and Persistence Burkhard Freitag, Cliff B. Jones, Christian Lengauer, Hans-Jörg Schek, 2012-12-06 Both object orientation and parallelism are modern programming paradigms which have gained much popularity in the last 10-15 years Object orientation raises hopes for increased productivity of software generation and maintenance methods Parallelism can serve to structure a problem but also promises faster program execution The two areas of computing science in which these paradigms play the most prominent role are programming languages and databases In programming languages one can take an academic approach with a primary focus on the generality of the semantics of the language constructs which support the respective paradigm In databases one is willing to restrict the power of the constructs in the interest of increased efficiency Inter and intra object parallelism have received an increasing amount of attention in the last few years by researchers in the area of object oriented programming At first glance an object is very similar to a process which offers services to other processes and demands services from them It has however transpired that object oriented concepts cause problems when combined with parallelism In programming languages the introduction of parallelism and the synchronization constraints it brings with it can get in the way of code reusability In databases the combination of object orientation and parallelism requires for example a generalization of the transaction model new approaches to the specification of information systems and

implementation model of object communication and the design of an overall system architecture There has been insufficient communication between researchers in programming languages and in databases on these issues Object Orientation with Parallelism and Persistence grew out of a Dagstuhl Seminar of the same title in April 1995 whose goal it was to put the new research area object orientation with parallelism on an interdisciplinary basis Object Orientation with Parallelism and Persistence will be of interest to researchers and professionals working in software engineering programming languages and database systems [Computerworld](#) ,2004-11-01 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network **Mathematical Reviews** ,2000 **Government Reports Announcements & Index** ,1989-05 *Metals Abstracts* ,1992 **Electrical & Electronics Abstracts** ,1989
