Machinery Fred Herbert Colvin,Lester Gray French,1959 *Subject Guide to Books in Print* ,1996 *Methods for Reliability Improvement and Risk Reduction* Michael Todinov,2018-10-10 Reliability is one of the most important attributes for the products and processes of any company or organization This important work provides a powerful framework of domain independent reliability improvement and risk reducing methods which can greatly lower risk in any area of human activity It reviews existing methods for risk reduction that can be classified as domain independent and introduces the following new domain independent reliability improvement and risk reduction methods Separation Stochastic separation

Introducing deliberate weaknesses Segmentation Self reinforcement Inversion Reducing the rate of accumulation of damage
Permutation Substitution Limiting the space and time exposure Comparative reliability models The domain independent
methods for reliability improvement and risk reduction do not depend on the availability of past failure data domain specific
expertise or knowledge of the failure mechanisms underlying the failure modes Through numerous examples and case
studies this invaluable guide shows that many of the new domain independent methods improve reliability at no extra cost or
at a low cost Using the proven methods in this book any company and organisation can greatly enhance the reliability of its
products and operations
