Ordnance Corps, 1961 *Human Performance on the Flight Deck* Professor Don Harris, 2012-10-01 Taking an integrated systems approach to human performance issues on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised It also affirms the upside of human factors in aviation and avoids placing undue emphasis on when the human component fails Data Base Directory, 1994 Federal Register, 2014 **Statistical Methods for Data Analysis in Particle Physics** Luca Lista, 2015-07-24 This concise set of course based notes provides the reader with the main concepts and tools to perform statistical analysis of experimental data in particular in the field of high energy physics HEP First an introduction to probability theory and basic statistics is given mainly as reminder from advanced undergraduate studies yet also in view to clearly distinguish the Frequentist versus Bayesian approaches and interpretations in subsequent applications More advanced concepts and applications are gradually introduced culminating in the chapter on upper limits as many applications in HEP concern hypothesis testing where often the main goal is to provide better and better limits so as to be able to distinguish eventually between competing hypotheses or to rule out some of them altogether Many worked examples will help newcomers to the field and graduate students to understand the pitfalls in applying theoretical concepts to actual data SOFSEM '98: Theory and Practice of Informatics Branislav Rován, 1998 This book constitutes the proceedings of the 25th Seminar on Current Trends in Theory and Practice of Informatics SOFSEM 98 held in Jasna Slovakia in November 1998 The volume presents 19 invited survey articles by internationally well known authorities together with 18 revised full research papers carefully reviewed and selected for inclusion in the book The areas covered include history of models of computation algorithms formal methods practical aspects of software engineering database systems parallel and distributed systems electronic commerce and electronic documents and digital libraries Critical Infrastructure Protection E.
