

POWER CONVERTER OPERATION ON 120 VAC

If your power converter is equipped with the automatic power switch it is normally in the BATTERY position. When you wish to run self contained on battery power only, you merely have to turn on the lights or any 12 volt convenience. If your power converter is equipped with the manual power switch you must press the rocker switch to BATTERY position before your lights will operate on battery.

When your power converter is operating on battery, the 12 volt battery power enters the converter through the power switch and on through the 12 volt distribution panel to the various 12 volt conveniences. The battery is then supplying power to the same conveniences as the transformer was previously powering. On the power converters equipped with a manual power switch there is a center OFF position where all 12 volt power to your coach is turned off.

BATTERY CHARGER OPERATION

The battery charger portion of your power converter is fully automatic. When your R.V. is plugged into 120 VAC power the charger will automatically bring your battery to a full charge condition then taper off to a trickle charge to maintain full charge condition. Warning: Check your R.V. battery water level weekly.

CHARGE SENTINEL LIGHT (L.E.D.)

A visual indication of the amount of current that is charging your battery from the power converter. However, this is only an indication of a charge to the battery. If any problems occur with the charge sentinel light, you should put an ammeter between the converter and battery to see if the charger is working correctly.

LIGHT (L.E.D.) INDICATES

1. Continuous bright light: Battery is being charged. This will change to a flashing light as explained in number 3.
2. Continuous bright light on all the time: Battery is being over charged. Loss of water in the battery is an indication of this condition.
3. Flashing light: Battery has reached approximately 90% of full charge. It will continue to flash several times a second as long as the battery is over 90% of full charge under normal conditions.
4. No light:
 - A. Battery is fully charged. This condition happens to a few units, but is a normal condition.
 - B. No charge going to the battery.
Warning: The charge sentinel will not work when there is no battery in the R.V. or when the converter is not plugged into 120 VAC power.
 - C. L.E.D. (Light Emitting Diode) is defective. Replace L.E.D. or replace the P.C. board.
5. Light stays on after converter or 120 VAC power is unplugged: P.C. board is defective. Have it repaired or replaced.

MAXIMUM RATING

Letter	Charger Output
M	5A
D	10A
L	15A
