

PAIN MANAGEMENT: ASSESSMENT AND NON-PHARMACOLOGICAL CARE

Pain is among the most common complaints among clients seeking medical care. More than 25% of the US population suffers from chronic pain. Failure to manage chronic pain, along with the associated risks of opioid use, result in significant morbidity and mortality. In this context, the medical community has increasingly recognized the need for a multi-modality and interdisciplinary team approach to pain management, including use of nonpharmacologic interventions.

Acute vs chronic pain

Acute pain:

- Specific disease or injury as cause
- Useful biological purpose
- Self-limited; resolves with normal healing process
- Treatment aimed at underlying cause

Chronic pain:

- Lasting > 3 months (disease state)
- No biological purpose
- Types: neuropathic, nociceptive, musculoskeletal, inflammatory, psychogenic, mechanical

Pain assessment tools

Wong-Baker faces scale

Good for younger children or adults who may have difficulty verbalizing, but can point to a face to indicate their pain level.

FLACC and PAINAD scales
