Pal Test And Answers 2013:

Frontiers In Pattern Recognition And Artificial Intelligence Marleah Blom, Nicola Nobile, Ching Yee

Suen, 2019-06-17 The fifth volume in this book series consists of a collection of new papers written by a diverse group of international scholars. Papers and presentations were carefully selected from 160 papers submitted to the International Conference on Pattern Recognition and Artificial Intelligence held in Montreal, Quebec, May 2018, and an associated free public lecture entitled Artificial Intelligence and Pattern Recognition: Trendy Technologies in Our Modern Digital World. Chapters address topics such as the evolution of AI, natural language processing, off and on line handwriting analysis, tracking and detection systems, neural networks, rating video games, computer aided diagnosis, and digital learning. Within an increasingly digital world, artificial intelligence is becoming a household term and a topic of great interest to many people worldwide. Pattern recognition, in using key features to classify data, has a strong relationship with artificial intelligence. This book not only complements other monographs in the series, it also provides the latest information. It is geared to promote interest and understanding about pattern recognition and artificial intelligence to the general public. It may also be of interest to graduate students and researchers in the field. Rather than focusing on one specific area, the book introduces readers to various basic concepts and to various potential areas where pattern recognition and artificial intelligence can be applied to make valuable contributions to other fields such as medicine, teaching and learning, forensic science, surveillance, online reviews, computer vision, and object tracking.
