Philosophy and Computing Thomas M. Powers, 2017-10-26 This book features papers from CEPE IACAP 2015 a joint international conference focused on the philosophy of computing Inside readers will discover essays that explore current issues in epistemology philosophy of mind logic and philosophy of science from the lens of computation Coverage also examines applied issues related to ethical social and political interest The contributors first explore how computation has changed philosophical inquiry Computers are now capable of joining humans in exploring foundational issues Thus we can ponder machine generated explanation thought agency and other quite fascinating concepts The papers are also concerned with normative aspects of the computer and information technology revolution They examine technology specific analyses of key challenges from Big Data to autonomous robots to expert systems for infrastructure control and financial services The virtue of a collection that ranges over philosophical questions such as this one does lies in the prospects for a more integrated

understanding of issues These are early days in the partnership between philosophy and information technology Philosophers and researchers are still sorting out many foundational issues They will need to deploy all of the tools of philosophy to establish this foundation This volume admirably showcases those tools in the hands of some excellent scholars

Reflections on Programming Systems Liesbeth De Mol, Giuseppe Primiero, 2019-01-10 This book presents a historical and philosophical analysis of programming systems intended as large computational systems like for instance operating systems programmed to control processes The introduction to the volume emphasizes the contemporary need of providing a foundational analysis of such systems rooted in a broader historical and philosophical discussion The different chapters are grouped around three major themes The first concerns the early history of large systems developed against the background of issues related to the growing semantic gap between hardware and code The second revisits the fundamental issue of complexity of large systems dealt with by the use of formal methods and the development of grand designs like Unix Finally a third part considers several issues related to programming systems in the real world including chapters on aesthetical ethical and political issues This book will interest researchers from a diversity of backgrounds It will appeal to historians philosophers as well as logicians and computer scientists who want to engage with topics relevant to the history and philosophy of programming and more specifically the role of programming systems in the foundations of computing

Agents and Computational Autonomy Matthias Nickles, Michael Rovatsos, Gerhard Weiß, 2004-08-05 This volume contains the postproceedings of the 1st International Workshop on Computational Autonomy Potential Risks Solutions AUTONOMY 2003 held at the 2nd International Joint Conference on Autonomous Agents and Multi agent Systems AAMAS2003 July 14 2003 Melbourne Australia Apart from revised versions of the accepted workshop papers we have included invited contributions from leading experts in the field With this the present volume represents the first comprehensive survey of the state of the art of research on autonomy capturing different theories of autonomy perspectives on autonomy in different kinds of agent based systems and practical approaches to dealing with agent autonomy Agent orientation refers to a software development perspective that has evolved in the past 25 years in the fields of computational agents and multiagent systems The basic notion underlying this perspective is that of a computational agent that is an entity whose behavior deserves to be called executable social and autonomous As an autonomous entity an agent possesses action choice and is at least to some extent capable of deciding and acting under self control Through its emphasis on autonomy agent orientation significantly differs from traditional engineering perspectives such as structure orientation or object orientation These perspectives are targeted on the development of systems whose behavior is fully determined and controlled by external units e.g. by a programmer at design time and/or a user at run time and thus inherently fail to capture the notion of autonomy

Multiagent System Technologies Gabriela Lindemann, 2004-09-23 This book constitutes the refereed proceedings of the Second German Conference on Multiagent Systems Technologies MATES 2004 held in Erfurt Germany in September 2004 The 22 revised full

Embracing the Cloud as a Business Essential Rai, Pankaj Kumar, Ahmad, Tanveer, Pandey, B.K., 2025-04-08. Through cloud computing a vast amount of processing power may now be accessed with only a few clicks of the mouse. As a consequence of this the manner in which businesses approach computers for the purposes of conducting research and carrying out commercial activities will undergo a considerable transition. This move marks a substantial democratization of computing power which means that it will have an influence on every industry and will ignite the flames of innovation at a rate that has never been seen before. *Embracing the Cloud as a Business Essential* explores the transformation brought about by the shift in the way that processing power is utilized. It discusses Computer as a Commodity rather than Computer as a Service as the proper moment for enterprises to begin addressing its utilization. Covering topics such as cost management, marginalized communities and smart contracts, this book is an excellent resource for business leaders, computer programmers, cloud developers, professionals, researchers, scholars, academicians and more.

Multiagent System Technologies Gabriela Lindemann-v. Trzebiatowski, Jörg Denzinger, Ingo J. Timm, Rainer Unland, 2004-11-16. After the huge success of the 1st German Conference on Multiagent System Technologies MATES last year in Erfurt, the German Special Interest Group on Distributed Artificial Intelligence together with the steering committee of MATES proudly organized and conducted this international conference for the second time. The goal of the MATES conference is to constitute a high quality platform for the presentation and discussion of new research results and system developments. It provides an interdisciplinary forum for researchers, users and developers to present and discuss the latest advances in research work as well as prototyped or deployed systems of intelligent agents. The conference covers the complete range from theory to application of agent and multiagent technologies. MATES 2004 was conducted as an integral part of the 5th International Conference Net Object Days 2004 along with the 8th International Workshop on Cooperative Information Agents CIA 2004, Autumn meeting of FIPA Foundation for Intelligent Physical Agents, Prototype and Product Exhibition of Agent Related Platforms, Frameworks, Systems, Applications and Tools. As such, all these events together may have formed the biggest agent related event of this year in Europe and one of the biggest worldwide. The call for papers attracted about 60 submissions from all over the world. After a careful reviewing process, the international program committee accepted 22 high quality papers of particular relevance and quality. The selected contributions cover a wide range of exciting topics in particular agent analysis and security, agent negotiation and control, agents and software engineering simulation and agents and agent policies and testing. Exciting highlights of the conference were the invited talks by Jim Odell on Agent UML 2.0 Too Radical or Not Radical Enough and Cristiano Castelfranchi on Emergence and Cognition Towards a Synthetic Paradigm in AI and Cognitive Science. Moreover, several agent related tutorials
