**Oracle Primavera P6 Version 8, 15 and 16 EPPM Web Administrators Guide** Paul E. Harris, 2016-08-19 This publication has been written to explain the functions that an administrator must understand in order to set up and manage a Primavera P6 EPPM database. This publication may be used to run a training course and includes exercises at the end of each chapter for the students to complete. After the course, students may use this publication as a reference book. The book is aimed at assisting database administrators to understand how to configure and administer a P6 database after the software and databases have been installed. The objectives of this book are to demonstrate the structure of a P6 database, the P6 tools available to access, set up, and administer a P6 Database, the steps that should be considered when implementing a P6 database, the P6 functions that an Administrator must understand in order to successfully administer a P6 EPPM database, how to setup, configure a P6 Database using the Web interface, and how to administer a P6 Database using the Web interface. The book is aimed at people who wish to learn the software but are unable to attend a training course and find the software reference manual hard going. Project management companies who wish to run their own software training courses or provide their employees with an alternative text to the vendor-supplied user manual. Training organizations requiring a training manual to run their own training courses. This book is a PMI Approved course and instructors' PowerPoint slide shows are available to training organizations. PMI REPs may apply to have this course licensed to them and award 14 PDUs to each attendee. Primavera Systems Inc. originally asked the author to write this book, and this publication is ideal for people who would like to gain an understanding of how the software operates up to an intermediate level. It covers the Primavera Versions 8, 15, and 16 EPPM Web tool, and the book is designed to show administrators in any industry how to setup an EPPM database. It explains in plain English and in a logical sequence the steps required to create and maintain an EPPM database. It tackles some of the more complex aspects of the software that the user manual does not address. The book is intended to be used as a self-teach book or a user guide or a training manual for a two-day training course. This book is written by an experienced scheduler who has used the software at the sharp end of projects and is not a techno. It draws on the author's practical experience in using the software in a wide variety of industries. About the Author: Paul Harris holds an Honours Degree in Civil Engineering obtained in the UK and is a Certified Cost Engineer through AACEI International, a PRINCE2 Registered Practitioner, and a Managing Successful Programmes Registered Practitioner. He has worked in the project controls industry for a number of years and has assisted many companies in a range of industries to set up and run project controls systems. His Melbourne, Australia-based company, Eastwood Harris Pty Ltd, offers project controls consulting and training services worldwide with a strong focus on Microsoft Project and Primavera software.

*Failure mechanisms in unsaturated silty sand slopes triggered by rainfall* Amin Askarinejad, 2015-11-26 Landslides triggered by rainfall cause significant damage to infrastructure annually and affect many lives in several parts of the world including Switzerland These landslides are initiated by a decrease in the effective stresses and hence the shear strength of the soil as a result of the increase in pore water pressure The frequency of their occurrence is directly affected by the climatic and hydrological conditions in the region Therefore it is expected that the predicted rise in the number of extreme meteorological events accompanied by the concentration of population and infrastructure in mountainous regions will result in an increased number of casualties associated with landslides in the future The main goal of this doctoral project was to study the effects of pore water pressure perturbations on the stability of unsaturated silty sand slopes and to investigate the mechanisms leading to the initiation and propagation of the shear deformations and eventually possible rapid mass movements The behaviour of the test slope prior to the failure induced by the artificial rainfall event was investigated using analytical and numerical methods The mechanical features of unsaturated soils and reinforcing effects of the vegetation were implemented in 2D and 3D limit equilibrium analysis The possible depth of the failure surface was calculated based on these simplified models and was compared with the depth of the real failure surface in the landslide triggering experiment The soil bedrock interactions in terms of the pattern of pore pressure distributions and their influence on stabilising or destabilising the slope were studied and the results were compared to the field measurements
