AI vs Humans Michael W. Eysenck, Christine Eysenck, 2021-12-30 The great majority of books on artificial intelligence are written by AI experts who understandably focus on its achievements and potential transformative effects on society In contrast AI vs Humans is written by two psychologists Michael and Christine Eysenck whose perspective on AI including robotics is based on their knowledge and understanding of human cognition This book evaluates the strengths and limitations of people and AI The authors expertise equips them well to consider this by seeing how well or badly AI compares to human intelligence They accept that AI matches or exceeds human ability in many spheres such as mathematical calculations complex games e g chess Go and poker diagnosis from medical images and robotic surgery However the human tendency to anthropomorphise has led many people to claim mistakenly that AI systems can think infer reason and understand while engaging in information processing In fact such systems lack all those cognitive skills and are also deficient in the quintessentially human abilities of flexibility of thinking and general intelligence At a time when human commitment to AI appears unstoppable this up to date book advocates a symbiotic and co operative relationship between humans and AI It will be essential reading for anyone interested in AI and human cognition

Digital Stimulation Mimi Marinucci, 2024-09-05 Digital Stimulation explores the subject of intimacy including romantic and sexual intimacy between human and nonhuman entities particularly technological entities As relationships between humans and machines become increasingly prevalent it is important to address the potential for such relationships to reflect to reinforce or to reinvent existing hierarchies The distinction between man and machine like the distinction between man and beast between man and brute between man and nature between man and woman and so on is an expression of the anthropocentrism and androcentrism permeating western ideas of self and other Concerns about the representation or misrepresentation and treatment or mistreatment of machines are of consequence for other human and nonhuman others as well and this book details many of the ways in which depictions of machines especially robots mirror ideas and attitudes about various human and nonhuman others This book also addresses the ongoing development of machines designed explicitly for intimate engagement with humans such as sex robots As they become more and more lifelike it becomes progressively more urgent to cultivate compassion toward such machines

Entrepreneurship in Tourism Andreas Walmsley, 2025-05-29 This timely and innovative book is a theoretically underpinned yet accessible introduction to entrepreneurship in tourism. The volume takes an intuitive step by step approach through entrepreneurship in tourism; it begins with a review of key concepts in entrepreneurship and applies these to tourism; it then tackles the practical elements of the entrepreneurial process in tourism as well as firm growth with a specific focus on entrepreneurial marketing. The final chapters of the book take a more macro perspective at reviewing the place of entrepreneurship in society and how context shapes entrepreneurship in tourism. This second edition has been fully updated to include a wider restructure of the original text including the addition of chapters on the context of tourism, the addition of sustainable tourism entrepreneurship in a chapter on social and sustainable tourism entrepreneurship alongside a chapter on the role of tourism in offering a pathway to empowerment. New content covering key developments in entrepreneurship including important topics that are only beginning to find their way into tourism literature. This includes themes such as business models and business model innovation, crowdfunding in tourism, the role of AI and digitalisation in tourism, marketing sustainable tourism entrepreneurship, tourism entrepreneurial ecosystems and the role of tourism entrepreneurship in supporting empowerment and poverty alleviation. These novel themes co-exist alongside material from the first edition that remains under researched such as how tourism firms may maintain an entrepreneurial orientation and innovations in tourism employment. Updated global case studies and examples from industry and academia throughout. Each chapter offers an abstract, learning outcomes and a series of questions to stimulate critical engagement with the material covered. As such, the text offers an invaluable resource to tutors and their students on both undergraduate and postgraduate programmes in tourism as well as tourism scholars engaging with the dynamic phenomenon of entrepreneurship in tourism.

March of the Machines Kevin Warwick, 2004 While horror films and science fiction have repeatedly warned of robots running amok, Kevin Warwick takes the threats out of the realm of fiction and into the real world, truly giving us something to worry about. Meeting skeptics head on, Warwick goes beyond his penetrating attacks on their assumptions and prejudices about what should be considered as intelligence to reveal what he has already achieved: building robots that communicate in their own language, share experiences, teach each other lessons and behave as they wish with regard to human beings. Part history of robotics and part futurism, *March of the Machines* surveys the substantial advances made in artificial intelligence over the past century while looking ahead to an increasingly uneasy relationship between humans and their creations.
