### Picking up the Scent

If you have a dog, you know he likes to sniff things. But did you know that a dog's sense of smell is about 100 times greater than yours?

This amazing ability can help humans in many ways. Dogs can be trained to find missing people. They can check for human health problems, such as diabetes and cancer. They also can locate drugs and weapons.

The good news is that this uncomfortable condition usually doesn't last long. Your taste comes back as soon as you are breathing easily again.

Another difference is that humans can be sick from their sense of smell. The passage "Taste and Smell—What's the Connection?" says that humans have a very strong sense of smell. They experience a similar

Benjamin, 2011-01-07 The chapters in this volume are testament to the many ways in

which Robert Bjork's ideas have shaped the course of research on human memory over four decades. It showcases the theoretical advances and recent findings by researchers whose work and careers have been influenced by Bjork. The first group of chapters explore the idea that forgetting is an adaptive response to the demands of a retrieval system fraught with competition, an idea that has helped recalibrate conceptualizations of memory away from one in which the computer is the dominant metaphor. Several chapters then review the application of research on learning and memory to enhancing human performance, reflecting Bjork's staunch commitment to translating his findings and theories to real-world settings. Later chapters address topics that are relevant to the translation of cognitive psychology to human performance and in particular recognize the critical role of metacognition in such problems. The final chapters cover a variety of issues related to how remembering can be enhanced and how research on remembering can be profitably guided by the use of mathematical modeling. This volume will appeal to researchers and graduate students of human learning, memory, and forgetting and will also benefit an audience working in applied domains such as training and education. *(Re)imagining Translanguaging Pedagogies through Teacher-Researcher Collaboration* Leah Shepard-Carey, Zhongfeng Tian, 2023-06-08. This book presents one possible pathway towards the advancement of translanguaging pedagogies, teacher-researcher partnerships. Although the existing literature alludes to the value of such partnerships, there is a lack of research that explicitly describes the complex processes of designing and implementing translanguaging pedagogies in primary and secondary school settings, K-12, across various international contexts. Through an expanded focus on teacher-researcher collaboration and the negotiation process, the book unpacks the opportunities and challenges of engaging in contextualized translanguaging designs with reference to broader ideological discourses and systemic structures. By promoting and highlighting teacher-researcher partnerships as one avenue for improvement and transparency, the chapters in this book demonstrate the potential of translanguaging pedagogies in classrooms and further resist the linguistic hierarchies that exist in educational institutions today.
