The Exploratorium Science Snackbook Exploratorium Teacher Institute, 2009-10-05 Kids and teachers can build their own science projects based on exhibits from San Francisco's premiere science museum. This revised and updated edition offers instructions for building junior versions or snacks of the famed Exploratorium's exhibits. The snacks designed by science teachers can be used as demonstrations, labs, or as student science projects, and all 100 projects are easy to build from common materials. The Exploratorium, a renowned hands-on science museum founded by physicist and educator Frank Oppenheimer, is noted for its interactive exhibits that richly illustrate scientific concepts and stimulate learning. Offers a step-by-step guide for building dynamic science projects and exhibits. Includes tips for creating projects made from easy-to-assemble items. Thoroughly revised and updated, including new snacks, images, and references. *Student Study Guide & Selected Solutions Manual* David D. Reid, 2007 *Lecture Tutorials for Introductory Astronomy* Jeff Adams, Edward E. Prather, Tim Slater, Timothy F. Slater, Jack Dostal, 2004-03 *Lecture Tutorials for Introductory Astronomy* which was developed by the Conceptual Astronomy and Physics Education Research CAPER Team is a collection of classroom-tested activities designed for the large lecture introductory astronomy class, although it is suitable for any astronomy class. The Lecture Tutorials are short, structured activities designed for students to complete while working in pairs. Each activity targets one or more specific learning objectives based on research on student difficulties in astronomy. Most activities can be completed in 10 to 15 minutes. The instructor's guide provides for each activity the recommended prerequisite knowledge, the learning goals for the activity, a pre-activity assessment question, an answer key, suggestions for implementation, and follow-up questions to be used for class discussion or homework. **Student Study Guide and Selected Solutions Manual, Volume 2** Bo Lou, 2006-05 **Astronomy** Eric Chaisson, Stephen McMillan, 2007 A brief introductory astronomy book designed for readers with little or no scientific background. A Beginner's Guide uses an exceptionally clear writing style. The authors present a broad view of astronomy without complex mathematics, yet the book discusses important concepts without simplification. The book's organization follows the popular and effective Earth Out progression, starting with our planet and then moving through the solar system. A study of the Sun as a model star follows, then the book covers the Milky Way Galaxy, cosmology, and the universe as a whole. Because of its easy-to-read yet comprehensive coverage of astronomy, this book can serve as excellent reference material for those readers interested in learning about our universe. Personal Response System Through a partnership with Interwrite PRS, this text is available with the PRS clicker system. The Instructor Resource Center on CD-ROM contains conceptual clicker questions in PowerPoint. **Physics** James S. Walker, 2007 This text for courses in introductory algebra-based physics features a combination of pedagogical tools: exercises, worked examples, active examples, and conceptual checkpoints. *Physics* Art Hobson, 2007 For a one-semester course in liberal arts physics, Hobson has four unifying themes: How do we know the significance of post-Newtonian physics, modern physics, energy, and the social context of

physics These themes become evident in the writing and pedagogy throughout the fourth edition The Publishers' Trade List Annual ,1985 **Space, Time, and Geometry** Patrick Suppes,1973-12-31 The articles in this volume have been stimulated in two different ways More than two years ago the editor of Synthese Jaakko Hintikka announced a special issue devoted to space and time and articles were solicited Part of the reason for that announcement was also the second source of papers Several years ago I gave a seminar on special relativity at Stanford and the papers by Domotor Harrison Hudgin Latzer and myself partially arose out of discussion in that seminar All of the papers except those of Grünbaum Fine the second paper of Friedman and the paper of Adams appeared in a special double issue of Synthese 24 1972 Nos 1 2 I am pleased to have been able to add the four additional papers mentioned in making the special issue a volume in the Synthese Library Of these four additional articles only the one by Fine has previously appeared in print Synthese 22 1971 448 481 its relevance to the present volume is apparent In preparing the papers for publication and in carrying out the various editorial chores of such a task I am very much indebted to Mrs Lillian O Toole for her extensive assistance
