- 2.1 This is an observational study. The treatments (length of stay) were determined by the condition of the patients. (In an experiment the patients would be assigned to the various lengths of stay by the investigators, usually using random assignment.)
- 2.2 This was an experiment, since the investigators (not the students) determined which discussion sections received the chocolate and which did not.
- 2.3 This was an experiment, since the professor (not the students) determined who was supplying a buying price and who was supplying a selling price.
- 2.4
- a This is an observational study.
 - b No. It is quite possible, for example, that those children who averaged more than two hours of television viewing per day received, generally speaking, a less good education than those who did not, and that it is the less good education, and not the television viewing, that caused the lower reading scores.
