

Pedigree Analysis Question Sheet

Version B

The following pedigree represents the inheritance pattern for the sex-linked, recessive trait colour-blindness in humans. The person making this pedigree did NOT identify the carriers of the trait, just those with or without colour blindness. You have to identify the genotypes of all individuals, by writing the genotype clearly above the number. To do this you will use the allele symbols X^B for normal colour vision and X^b for the colour-blindness. You must also use the appropriate symbols for the genders. Fill in the genotypes of each of the 23 individuals shown. If the complete genotype can not be determined then the symbol X^- MUST be used for the unknown allele.

Making a Difference: Volume I and II Sasha A. Barab,Kenneth E. Hay,Nancy Butler Songer,Daniel T. Hickey,2017-09-05 William Wordsworth 1770 1850 needs little introduction as the central figure in Romantic poetry and a crucial influence in the development of poetry generally This broad ranging survey redefines the variety of his writing by showing how it incorporates contemporary concepts of language difference and the ways in which popular and serious literature were compared and distinguished during this period It

discusses many of Wordsworth's later poems comparing his work with that of his regional contemporaries as well as major writers such as Scott. The key theme of relationship both between characters within poems and between poet and reader is explored through Wordsworth's construction of community and his use of power relationships. A serious discussion of the place of sexual feeling in his writing is also included.
